2. Safety Instructions, Warnings and Notes

2.1 Safety Instructions

2.1.1 General Safety

Safety regulations require that during a repair:

- Connect the unit to the mains via an isolation transformer.
- Replace safety components, indicated by the symbol ▲, only by components identical to the original ones. Any other component substitution (other than original type) may increase risk of fire or electrical shock hazard.

Safety regulations require that after a repair, you must return the unit in its original condition. Pay, in particular, attention to the following points:

- Route the wires/cables correctly, and fix them with the mounted cable clamps.
- Check the insulation of the mains lead for external damage.
- Check the electrical DC resistance between the mains plug and the secondary side:
 1. Unplug the mains cord, and connect a wire between the two pins of the mains plug.
 2. Set the mains switch to the 'on' position (keep the mains cord unplugged!).
 3. Measure the resistance value between the mains plug and the front panel, controls, and chassis bottom.
 4. Repair or correct unit when the resistance measurement is less than 1 MΩ.
 5. Verify this, before you return the unit to the customer/user (ref. UL-standard no. 1492).
 6. Switch the unit 'off', and remove the wire between the two pins of the mains plug.

2.1.2 Laser Safety

This unit employs a laser. Only qualified service personnel may remove the cover, or attempt to service this device (due to possible eye injury).

Laser Device Unit

| | |
|-----------------|--|
| Type | : Semiconductor laser GaAlAs |
| Wavelength | : 650 nm (DVD) : 780 nm (VCD/CD) |
| Output Power | : 20 mW (DVD+RW writing) : 0.8 mW (DVD reading) : 0.3 mW (VCD/CD reading) |
| Beam divergence | : 60 degree |

Figure 2-1 Class 1 Laser Product

Note: Use of controls or adjustments or performance of procedure other than those specified herein, may result in hazardous radiation exposure. Avoid direct exposure to beam.

2.2 Warnings

2.2.1 General

- All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD, symbol ▲). Careless handling during repair can reduce life drastically. Make sure that, during repair, you are at the same potential as the mass of the set by a wristband with resistance. Keep components and tools at this same potential. Available ESD protection equipment:
 - Complete kit ESD3 (small tablemat, wristband, connection box, extension cable and earth cable) 4822 310 10671.
 - Wristband tester 4822 344 13999.
- Be careful during measurements in the live voltage section. The primary side of the power supply (pos. 1005), including the heatsink, carries live mains voltage when you connect the player to the mains (even when the player is 'off!'). It is possible to touch copper tracks and/or components in this unshielded primary area, when you service the player. Service personnel must take precautions to prevent touching this area or components in this area. A 'lightning stroke' and a stripe-marked printing on the printed wiring board, indicate the primary side of the power supply.
- Never replace modules, or components, while the unit is 'on'.

2.2.2 Laser

- The use of optical instruments with this product, will increase eye hazard.
- Only qualified service personnel may remove the cover or attempt to service this device, due to possible eye injury.
- Repair handling should take place as much as possible with a disc loaded inside the player.
- Text below is placed inside the unit, on the laser cover shield:

CAUTION VISIBLE AND INVISIBLE LASER RADIATION WHEN OPEN AVOID EXPOSURE TO BEAM

2.3 Service Hints

2.3.1 Switched Mode Power Supply

The power supply unit has to be replaced in case of failure. The schematic provided in the manual is only for information and no service parts will be available.

2.3.2 DVD Module

This module can be repaired as follows:

1. The VAL6011/14 is a combination of loading mechanism and DVD-mechanism. Both are not repairable units and in case of failure, it has to be replaced with a new loader VAL6011/14.

Note: When replacing with a new VAL6011/14, two solder joints have to be removed after connecting the OPU flex foil to the mono board.

The solder joints, which shortcircuits the laser diodes to ground, are for protection against ESD. Refer to figures 2-5 and 2-6 for location of solder joints.

2. The mono board has to be repaired down to component level. Repair handling of the monoboard requires a workshop with sophisticated desoldering tools.

Figure 2-5 Solder joints

Figure 2-6 Solder joints

2.3.3 ComPair

For assistance with the repair process of the monoboard an electronic fault finding guidance has been developed. This program is called ComPair.

This ComPair program is available on CDROM.

The version of the CDROM for repair of the monoboard is V1.3 or higher and can be ordered with codenumber 4822 727 21637. This is an update CDROM, so when the ComPair CDROM is used for the first time, one has to install the ComPair Engine CDROM V1.2 first.

The V1.2 CDROM can be ordered with code number 4822 727 21634 and has to be registered after installation. The procedure for registration is explained in the help file of the program and in the CDROM booklet.

The cable to connect the monoboard with a PC can be ordered with codenumber: 3122 785 90017.

All the hardware and software requirements of the systems, necessary for working with ComPair, are described on the CDROM.

2.3.4 Service Positions

Refer to dismantling instructions for dismantling of the board. Figures 2-7 to 2-8 shows the service position that are recommended during repair of the boards.

Figure 2-7 SD4.00SA_CH module

Figure 2-8 DVD763SA model

3. Directions for Use

General Information

The region code for this set is 2.

Since it is usual for DVD movies to be released at different times in different regions of the world, all players have region codes and discs can have an optional region code. If you load a disc of a different region code to your player, you will see the region code notice on the screen. The disc will not playback, and should be unloaded.

Manufactured under license from Dolby Laboratories. "Dolby", "Pro Logic" and the double-D symbol are trademarks of Dolby Laboratories.

This product incorporates copyright protection technology that is protected by method claims of certain U.S. patents and other intellectual property rights owned by Macrovision Corporation and other rights owners. Use of this copyright protection technology must be authorised by Macrovision Corporation, and is intended for home and other limited viewing uses only unless otherwise authorised by Macrovision Corporation. Reverse engineering or disassembly is prohibited.

"DTS" and "DTS DIGITAL SURROUND" are registered trademarks of Digital Theater Systems, Inc.

This DVD/SACD player is in conformity with the EMC directive and low-voltage directive.

For Customer Use:

Read carefully the information located at the bottom of your DVD/SACD player and enter below the Serial No. Retain this information for future reference.

Model No. DVD/SACD

CAUTION
(WARNING LOCATION: ON THE BACKPLATE OF SET)
NEVER MAKE OR CHANGE CONNECTIONS WITH THE POWER SWITCHED ON.

Introduction

Thank you for purchasing this Philips DVD/SACD player. This Owner's Manual explains the basic operation of this DVD/SACD player.

Environmental Information

All unnecessary packaging has been omitted. The packaging has been made easy to separate into three materials: cardboard (box), polystyrene foam (buffer) and polyethylene (bags, protective foam sheet).

Your DVD/SACD player consists of materials which can be recycled and reused if disassembled by a specialised company. Please observe the local regulations regarding the disposal of packaging materials, exhausted batteries and old equipment.

Supplied accessories

- Remote control
- Batteries (two AA size) for remote control
- Audio cable
- SCART cable
- CVBS cable
- Owner's Manual

Safety Information

- Before operating the DVD player, check that the operating voltage indicated on the typeplate (or the voltage indication beside the voltage selector) is identical with the voltage of your local power supply. If not, please consult your dealer.

Note:

- **The typeplate is located at the bottom of the DVD player.**
- Place the DVD player on a flat, hard and stable surface.
- There must be sufficient room in front of the player for the disc tray to be opened.

- In cabinet, allow about 2.5 cm (1 inch) of free space all around the player for adequate ventilation.

- Do not expose your player to extreme of temperature or humidity.

- If the DVD player is brought directly from a cold to a warm location, or is placed in a very damp room, moisture may condense on the lens of the disc unit inside the DVD player. Should this occur, the DVD player would not operate normally. Leave the power on for about one hour with no disc in the DVD player until normal playback is possible.

- The mechanical parts of the set contain self-lubricating bearings and must not be oiled or lubricated.

- **When the DVD player is switched to Standby mode, it is still consuming some power. To disconnect the system from the power supply completely, remove the AC power plug from the wall socket.**

Symbols Used in this Manual

The below symbols appear in some headings and notes with the following meanings:

| | |
|--|---|
| | – Description refers to playback of DVD/Video discs |
| | – Description refers to playback of Video CDs |
| | – Description refers to playback of Audio CDs |
| | – Description refers to playback of Super Audio CDs |

Helpful Hints!

- **Some DVD video discs require specific functions or allow only limited functions during playback.**
- **“X” may appears on the TV screen which means that the function is not available on that specific DVD video disc.**

Introduction

SACD: reality in sound...and vision

This SACD player will not only surprise you with its superior reproduction of almost all existing audio formats. Connected to your TV, your SACD player presents VCD and DVD-video information as perfect digital studio-quality images with truly 3-dimensional digital multi-channel audio.

Super Audio CD

You will recognize Super Audio CDs by the logo. There are three types of Super Audio CDs: single-layer; dual-layer and hybrid discs. Each type may contain two areas of recorded information: a High Quality Stereo area and a High Quality Multi-channel area.

- The single layer disc may contain both information areas.
- The dual layer disc may contain both information areas but a double amount of information can be stored on the disc: thanks to the second layer.
- The hybrid disc may contain not only both information areas but also a second, standard CD layer, making it playable on standard CD players.

Recorded information may vary per area. This is indicated in the disc inlay. Areas can be selected separately before or during playback, while playing Super Audio CDs via the remote control or via the On-Screen Display on your TV.

Reality reproduced: Super Audio CD

The future in digital sound reproduction is no longer limited to a closely simulating of reality. The new audio standard IS reality! The human ear is no longer capable of distinguishing audible reality from digital reproduction. At Philips the future starts today with the Super Audio Compact Disc player. This Super Audio CD player combines superior sound quality with the possibility of playing almost all existing audio and video formats with a single player:

The Super Audio standard is based on Direct Stream Digital (DSD) technology. This new direct-stream digital format comprises a 1-bit system that has a digital sampling frequency that is 64 times higher than that of conventional audio CD. The results are spectacular: a frequency response of over 50k Hz and a 120dB dynamic range over the entire audible spectrum. Mixed with as many of the original frequencies as possible, the audio information audible for human ears sounds much more natural.

The next standard: hybrid disc

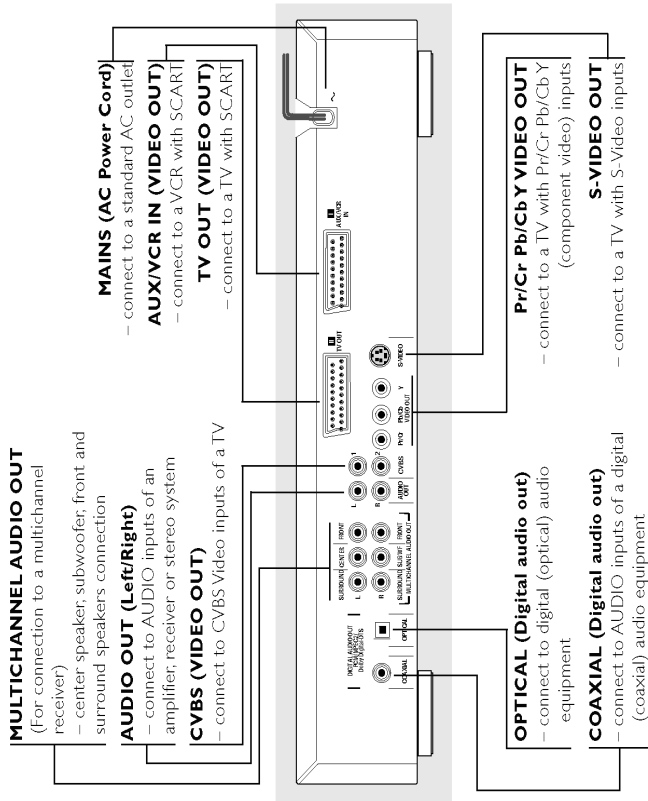

The Super Audio CD is the evolution of the CD that provides ultra-high-quality sound. Additional features, including multi-channel, can be offered. On the high density (HD) Super Audio CD you may have access to separate areas, containing two-channel stereo and multi-channel.

But that is not all! The hybrid version of the SACD guarantees backward compatibility with the installed base of CD and DVD players. In addition to the HD layer: the hybrid disc contains a standard density CD layer with conventional two-channel stereo CD audio information. The two layers are read from the same side of the disc. The HD layer is read by and DVD laser. The bottom reflective layer with conventional CD sound is read by the CD laser through the second, semi-transmissive HD layer.

Preparation

English

English

Warning!

- Never make or change connections with the power switched on.
- Connect the DVD/SACD player directly to your TV, instead of eg. a VCR, to avoid distortion because DVD video discs are copy protected.
- Do not connect the DVD/SACD player AUDIO OUT to the PHONO IN of your amplifier or receiver.

Preparation

Basic Connections

- Please refer to the instruction books of your TV, VCR, Stereo System or other devices as necessary to make the best connections.
- Make one of the following connections, depending on the capabilities of your existing equipment.

The following guidelines are options for the best picture and sound quality available on your DVD/SACD player.

Picture

- 1 Use the CVBS Video Output for good picture quality.
- 2 Use S-Video Output for the better picture quality.
- 3 Use SCART or Pr/Cr-Pb/Cb Y Output for best picture quality.

Note:

- RGB (on SCART) and YUV (Pr/Cr Pb/Cb Y) output signals are not available at the same time.
- To choose your preferred output connection, refer section "Personal Preferences - RGB/YUV switching".

Sound

- 1 Digital audio connections provide the clearest sound. Connect the DVD player's DIGITAL AUDIO OUT (either COAXIAL or OPTICAL) to your amplifier or receiver.

Note:

- Digital output is not available for SACD and MP3 discs.

- 2 If digital connections are not possible, connect the DVD player's LEFT/RIGHT FRONT, CENTRE, SUBWOOFER, LEFT/RIGHT SURROUND connectors to the corresponding inputs on your multi-channel audio/video receiver.

- 3 If both the above connections are not possible, connect the DVD player's Left and Right (white and red) AUDIO OUT to your amplifier, receiver, stereo or TV.

Connecting to a TV

- 1 Connect the SCART (TV OUT) on the DVD player to the corresponding connector on the TV.

Note:

- Ensure that the "TV" indication on SCART cable is connected to the TV set and "DVD" indication on SCART cable is connected to the DVD player.

If your TV is not equipped with SCART input, you can select the following connection:

If your TV has a CVBS Video input connector,

- 1 Connect the CVBS VIDEO OUT on the DVD player to the CVBS VIDEO IN on the TV.
- 2 Connect the Left and Right AUDIO OUT on the DVD player to the Left and Right AUDIO IN on the TV.

If your TV has a S-Video input connector,

- 1 Connect the S-VIDEO OUT on the DVD player to the S-VIDEO IN on the TV.
- 2 Connect the Left and Right AUDIO OUT on the DVD player to the Left and Right AUDIO IN on the TV.

Cinematic (on SCART)

This DVD player is equipped with cinematic feature (from Philips) which allows a more complete control of your home audio/video (AV) equipment.

Cinematic interconnection plug & playback will enable the AV system to recognise the users intention and automatically switch the necessary controls or input source accordingly. This will reduce the necessity of having multiple control inputs for all AV equipments (eg TV and Amplifier).

Connecting to an Audio System

- 1 You can also listen to the sound of audio CDs, stereo SACDs and DVD Video discs by connecting to an optional stereo system. Connect the FRONT LEFT/RIGHT AUDIO OUT on the DVD player multichannel audio output to the Left and Right AUDIO IN on the stereo system.
- 2

Important:

- For the best sound quality with playback of audio CDs and stereo SACDs, always use the left and right connectors of the high-quality stereo/Multi-channel audio output. The separate stereo output is intended only for connection to video equipment such as a TV set.

If your TV has a component video (Pr/Cr Pb/Cb Y) input connector,

- 1 Connect either S-Video or CVBS video out jack to TV.
- 2 Turn on the TV and go to Personal Preference menu (see Personal Preference).
- 3 Change the video output from RGB (default) to YUV (Pr/Cr-Pb/Cb Y).
- 4 Connect the Pr/Cr-Pb/Cb Y VIDEO OUT jacks on the DVD player to the corresponding INPUT on the TV using an optional Pr/Cr-Pb/Cb Y cable.
- 5 Connect the Left and Right AUDIO OUT jacks of the DVD player to the AUDIO Left/Right INPUT on the TV.

Preparation

English

Inserting batteries into the Remote Control

- 1 Open the battery cover.
- 2 Insert batteries (AA size) with the correct polarity as indicated by the + and - symbols inside the battery compartment.
- 3 Close the cover.

CAUTION!

- Remove batteries if they are exhausted or not to be used for a long time.
- Do not use old and new or different types of batteries in combination.
- Batteries contain chemical substances, so they should be disposed off properly and kept away from children.

Using the Remote Control

- Direct the remote control at the remote sensor of the DVD/SACD player.
- Do not drop the remote control.
- Do not leave the remote control near extremely hot or humid places.
- Do not spill water or put anything wet on the remote control.

Switching On

- 1 Connect the AC power cord to the power outlet.
 - 2 Switch on the TV and DVD player.
 - 3 Set the TV to the correct Video IN channel. (eg. EXT1, EXT2, AV1, AV2, AUDIO/VIDEO, etc - refer to your TV owner's manual for detail).
 - 4 The player display lights up and the default screen appears on the TV.
- If you are using an external equipment (eg. audio system or receiver), turn them on and select the appropriate input source that was used to connect to the DVD/SACD player output. Refer to the equipment owner's manual for detail.

Notes:

- If you do not have a proper picture or sound, refer to 'Troubleshooting' section.

Menu Bars on TV Screen

- Operations can be carried out directly via the multiple menu bars on the TV screen.
- The following functions are available via the menu bars. Pressing SYSTEM MENU keys repeatedly will toggle through menu bar 1, menu bar 2, menu bar 3 and menu bar OFF.

Menu bar 1

From the left,
Personal Preferences → Subtitle Language → Audio Language → Colour → Sound

Menu bar 2

From the left,
Step by step playback → Slow motion → Fast motion → Angle → Zoom

Menu bar 3

From the left,

Title → Chapter → Time Search →
Favourite Track Selection (FIS) → Wakeup Timer

Preparation

Connecting to a Digital Audio Equipment

If your receiver has an Dolby Digital, DTS or MPEG2 decoder,

- 1 Connect the COAXIAL or OPTICAL DIGITAL AUDIO OUT of the DVD player to the COAXIAL or OPTICAL DIGITAL AUDIO IN on your receiver.
- 2 Set the DVD player's digital output to ALL (see "Personal Preferences").

Notes:

- SACD audio is NOT available on the Digital audio output (coaxial or optical) as per the SACD standard.
- If the audio format of the digital output does not match the capabilities of your receiver, the receiver will produce a strong, distorted sound or no sound at all.
- MP3 Audio is not available on the Digital Output.

Connecting to a Multi-channel Audio/(Video) receiver with 6 connectors

This DVD/SACD player contains a multi-channel decoder. This enables playback of SACDs & DVDs recorded in Multi-channel. You only need to select Multi-channel using the Sound Mode key.

- 1 Connect the audio Left and Right outputs for Front speaker connection (1) to the corresponding input sockets on your receiver using the audio cable supplied.
- 2 Connect the audio outputs for Center speaker and Subwoofer connection (2) to the corresponding inputs on your receiver using an optional audio cable.
- 3 Connect the audio Left and Right outputs for Surround speaker connection (3) to the corresponding inputs on your receiver using an optional audio cable.

Note:

- If the subwoofer is equipped with its own amplifier, the Subwoofer connection should be connected directly to the subwoofer.

Preparation

- **TV System (NTSC/PAL Conversion)**
Allows you to select between PAL, NTSC and AUTO mode depending on your TV. Player's default setting is set to AUTO.

The conversions supported are as follows:

| Disc Type | Output format | |
|-----------|---------------|--------|
| | Format | System |
| DVD | NTSC | PAL |
| | PAL | NTSC |
| VCD | PAL | NTSC |
| | NTSC | PAL |

- 1 In the Personal Preferences Menu, select **TV System**.
- 2 Press **▲** or **▼** to select PAL, NTSC or AUTO.

- Notes:
- If you have a PAL-only TV, ensure that your PAL/NTSC setting is PAL.
 - AUTO can only be selected when using a TV that support both the NTSC and PAL systems.
 - This setting is applicable for CVBS output on cinch and SCART only.
 - Slight picture distortions may occur due to this conversion. This is normal. Thus, the AUTO format is most suitable for the best picture quality.

- **RGB/YUV switching (Video Output)**
This setting allows you to toggle the output of the video signal between RGB(on scart) and Y PrCr PbCb (YUV).

Warning:
When the player is set to Y PrCr PbCb (YUV), some TV may not properly synchronise with player on the SCART connector.

- **Monitor type selection**
Allows you to select the type of display device that is connected to the DVD/SACD Video player.
For each device, a set of predefined picture settings (eg Rich-Natural-Soft•Animation) is available. Or choose "Personal" that allows you to fine tune the brightness, saturation and contrast according to your preference.

- Notes:
- You can select one of the following display devices: eg TV, Plasma TV, Video Projector or Projection TV.

- **Smart Picture**
- **Colour settings**

You can select one of five predefined sets of colour settings and one set (Personal) which you can define yourself.
You can also press SMART PICTURE key (on the front panel) to access the colour settings in the menubar.

- When **Personal** is selected it allows you to fine-tune saturation, brightness and contrast.
- Use **▲** or **▼** keys to adjust the values of these parameters. Press OK or **◀** to exit.

English

English

Preparation

- Note:
- Pan Scan is subject to availability on the disc.

- **Black level shift (NTSC output only)**
Select ON for adapting the colour dynamics to obtain richer contrasts.

- **Video shift**
Use this setting to personalize the position of the picture on your TV by scrolling it to the left or right.

Temporary Feedback Field Icons

These icons will appear on the top left hand corner of your TV screen.

| | | | |
|---------|----------------|--------|-------------------|
| scan | Scan | h | Repeat A to end |
| repeat | Repeat All | A-B | Repeat A-B |
| title | Repeat Title | Angle | Angle |
| track | Repeat Track | locked | Child Lock On |
| chapter | Repeat Chapter | safe | Child Safe |
| shuffle | Shuffle | resume | Resume |
| shuffle | Shuffle Repeat | | Action Prohibited |

Personal Preferences

In the Personal Preferences settings menu, you can customize your player to suit your own particular requirements.

General operation:

- 1 Press SYSTEM MENU on the remote control.
 - 2 The **TV** will be highlighted in the menu bar.
 - 3 Press **▼** to activate the Personal Preferences menu.
 - 4 Use the **◀ ▶ ▲ ▼** keys to toggle through the functions and select your preferred option.
 - 5 Press OK to confirm a highlighted selection.
- The following items are available:

Picture

- **TV Shape**

Select the aspect ratio of the TV to be connected.
16:9 → when you connect a wide-screen TV to the DVD/SACD player.

4:3 LETTER BOX → when you connect a normal TV to the DVD/SACD player. Displays a wide picture with black bands displayed on the upper and lower portions of the TV screen.

4:3 PAN SCAN → when you connect a normal TV to the DVD/SACD player. Displays the wide picture on the whole TV screen with a portion automatically cut off.

Preparation

Sound

- **Digital output**
 - Digital output selection enables you to specify the type of digital output suitable for your receiver.
 - Select ALL (default setting), if you had connected your DIGITAL AUDIO OUT to a multichannel decoder/receiver.
 - Select PCM only if your receiver is not capable of decoding multichannel audio.
 - Select OFF to deactivate the DIGITAL AUDIO OUT.

Note:

- Digital output is not available for SACD and MP3 discs.

Analogue output

Select Stereo, Dolby Surround-compatible, 3D Sound or Multi-channel. Factory setting is Multi-channel.

Multi-channel: Select this setting when using a multi-channel audio/video receiver with six inputs. In this mode, the player will perform DTS decoding or Dolby Digital 5.1-channel decoding when applicable, and Dolby Pro Logic decoding on DVD-Video and Video-CD discs with 2-channel sound tracks. No Dolby Pro Logic decoding is done with (Super) Audio CD discs.

Stereo: In this setting, the 5.1 audio channels are down-mixed to a stereo signal. Select this setting when connecting to a TV, stereo amplifier/receiver, etc.

Notes:

- Multichannel output and downmixed stereo output are not available simultaneously.
- When multichannel is selected as analog output, the AUDIO OUT (Left/Right) will deliver the Centre channel data and not the downmixed Left/Right.

Dolby Surround-compatible: Select this setting when using an equipment with a Dolby Surround Pro Logic decoder. In this setting, the 5.1 audio channels (Dolby Digital, MPEG-2, DTS) are downmixed to a Dolby Surround-compatible 2-channel output.

3D-Sound: In a setup without rear speakers (analog stereo output), 3D Sound remixes the six channels of digital surround into a two-speaker output while retaining all of the original audio information. The result is the listening sensation of being surrounded by multiple speakers.

During DVD or Video-CD playback, these values can be selected directly with the SOUND MODE key.

Night Mode

When set to ON, the dynamics of your sound output are optimised. High volume outputs are softened, enabling you to watch your favourite action movie without disturbing others.

PCM Output

Allows to select PCM digital output between 48kHz and 96kHz. When 48kHz has been selected, 96kHz PCM data, (if available on disc) will be converted to 48kHz.

Some 96kHz DVD are copy protected. If your PCM output selection is 96kHz, the digital output will be muted to comply with the standards. In such cases, select 48kHz to enable digital output.

Karaoke vocal

Put this setting to ON only when a multi-channel karaoke DVD is being played. The karaoke channels on the disc will then be mixed into a normal stereo sound.

English

English

Preparation

Speaker settings

Allows you to select speaker settings, volume balance and delay time, and to test the speaker settings.

Speaker settings are only active on the Multi-Channel Audio outputs for both DVD and SACD. Speaker settings will not be applied during playback in the SACD Stereo mode.

Subwoofer

On: When you connect a subwoofer
Off: When a subwoofer is not connected

Delay times

The DVD player is set to reproduce correctly synchronized Digital Surround Sound in a listening area where the surround speakers are about 150cm nearer to the listening position than the front speakers, and the center speaker is in line with the front speakers. To adjust for other listening area arrangements, adapt delay times according to the following:

Digital Surround

Measure the distances in centimeters from the front speaker plane and from the surround speaker plane to the listening positioning plane. Subtract the surround distance from the front distance and divide by 30. The result is the required Surround Channel delay time in milliseconds.

If the center speaker is on the front speaker plane, no center speaker delay is needed. If, however, it is nearer to the listening position, measure the distance in centimeters between the front and center speaker planes, and divide by 30. The result is the required Center Channel delay time in milliseconds.

6 Channel settings

Front speaker

L (Large): When the front speakers can reproduce low frequency signals below 120Hz

S (Small): When the front speakers cannot produce low frequency signals below 120Hz

Center Speaker

L (Large): When the center speaker can reproduce low frequency signals below 120Hz

S (Small): When the center speaker cannot produce low frequency signals below 120Hz

Off: When the center speaker is not connected

Surround speakers

L (Large): When the surround speakers can reproduce low frequency signals below 120Hz

S (Small): When the surround speakers cannot produce low frequency signals below 120Hz

Off: When the surround speakers are not connected

Operation

English

English

– Status Window

Displays the current status of the player and appears with the menu bar. When disc playback is stopped, it is displayed with the 'Temporary Feedback Field' in the default screen. See 'On-Screen Display' information;
Factory setting is ON. Select OFF to suppress display of the Status Window.

– Bit Rate Indicator

Press the **DISPLAY** key to activate the bit rate indicator. When activated, the bit rate for video and audio, as well as the total bit rate is displayed. This is only applicable during playback of DVD and SVCD discs.

– Help text

When set to ON, help text describes the icons selected. Select OFF if you no longer require the help text.

– Beeper

The beeper can be set to ON or OFF.

– PBC (Playback Control - for VCD)

The Playback Control can be set to ON or OFF (see section "Special VCD & SVCD Features" for details).

– Smart Power OFF

Puts the set to standby after a predefined time. This can be set to ENABLE or DISABLE.

Dolby Pro Logic

If the delay times for Surround Channel and Center Channel are set for Digital Surround mode, the delay times for Dolby Pro Logic mode will automatically be calculated and set.

Language

Selecting disc languages:

Menu/Audio/Subtitle language

- This is to select the audio language, subtitle language and the language used in TV screen menus or DVD menus which will always be used for every disc to be played back.
- If the language selected is not available on the disc, the default language designated by each disc will be selected.

Features

– Access Control

Access Control contains the following features:
Child Lock - When Child Lock is set to ON, a 4-digit code needs to be entered in order to playback discs.
Parental control - Allows the conditional presentation of DVDs containing Parental Control Information (see 'Access Control' section).

Basic Playback

- 1 Press **STANDBY ON** on the front panel.
- 2 Press **OPEN/CLOSE** on the front panel to open disc loading tray.
- 3 Place the chosen disc in the tray, with the label facing up.
- 4 Press **OPEN/CLOSE** again to close the tray.
→ **REPEAT** appears in the status window and on the player display and playback starts automatically.

Notes:

- DVDs may have a region code. Your player will not play discs that have a region code different from the region code of your player.
- If 'Child Lock' is set to ON and the disc inserted is not authorised, the 4-digit code must be entered and/or the disc must be authorised (see 'Access Control').

Playing a DVD-Video

- DVD video discs may have one or more **TITLES**, and each **TITLE** may have one or more **CHAPTERS**.
- Playback stops at the end of each **TITLE**.

Playing a title

- 1 Insert a disc and close the tray; playback starts automatically.
→ The TV screen and DVD player's display show the type of disc loaded, disc's information and playing time.
- 2 When the Disc Menu appears on the TV screen, use **◀▶** keys or numerical keys on the remote control to select an option and continue playback.
If the titles are numbered, press the numerical keys or use the **▼▲** keys to select desired title in the menu bar.
- 3 To stop playback press **STOP**.

Smart Resume

- In stop mode and when a disc has not been ejected,
→ Pressing **PLAY** will automatically resume playback from the point where the playback was last stopped.

To deactivate auto resume,

- Press **STOP** to stop playback.
→ The help line text appears "Press Stop again to start from beginning" for 5 seconds.
- Press **STOP** again or unload the discs, the auto resume is cancelled.

To activate auto resume,

- Reload the disc and press **PLAY**.
→ Playback starts from the beginning of the title.
- When resume icon appears on the screen, press **PLAY** again.
→ Playback will resume from the point where the playback was last stopped.

Note:

- Resume feature is also applicable to VCDs and SVCDs.

Operation

Playing an Audio CD

- Audio CDs contain only TRACKS.
- They can be played on your DVD player with the audio output connected to a stereo system or to your TV.
- If CD-text is available on the disc, it will be displayed on both the TV screen and player's front display.
- Select tracks using the menubar on the TV screen or by pressing the numerical keys directly. Your DVD player also allows you to compile Favourite Track Selection (FTS) programmes for your discs by selecting or excluding tracks of your choice (see *FTS Programme - Audio CDs*).

Playing a disc

- 1 Insert a disc and close the tray, playback starts automatically.
→ The TV screen will display the number of tracks for selection and current playing status.
- 2 Playback will stop at the end of the disc.
- 3 To stop playback, press **STOP**.

Special DVD Features

DVDs may contain menus to navigate the disc and access special features. Press the appropriate numerical key or use the **▼▲▶◀** keys to highlight your selection in the DVD menu and press **OK** to confirm.

Title/Disc menu

- 1 Press **DISC MENU**.
→ If the current title has a menu, the menu will appear on the screen. Otherwise, the disc menu will be displayed.
- 2 If disc menu is available on the disc, audio language, subtitle options, chapters for the title and other options will appear for selection.
- 3 To remove the title/disc menu, press **DISC MENU** again.

Playing a disc

- 1 Insert a disc, and close the tray, playback starts automatically.
→ The TV screen will display the number of tracks for selection, current playing status and current playing layer.
- 2 Playback will stop at the end of the disc.
- 3 To stop playback, press **STOP**.

Sound Mode - SACD playback

- If the default Sound mode is set to multi channel and the inserted disc does not contain this mode, the player will automatically select the stereo mode.
- On hybrid discs (with SACD and CD layers), the player will always start playing the SACD layer. While the SACD disc is being played, the currently played layer is shown on the player front display as follows:
SA 6 (for SACD Multi channel)
SA 2 (for SACD stereo)
CD (for CD layer of SACD)
- You can switch between SACD multi channel and SACD stereo layers (depending on availability of the mode on the disc) while the disc is playing by pressing the Sound Mode button on the remote control or the player front. The mode change will be indicated on the player front display.
Switching between the SACD and CD layer is not possible during playback.
- Press **STOP** to stop the playback.
- 2 Press Sound Mode button on the remote control or the player front to toggle between SACD multi channel, SACD stereo and CD layers (depending on availability of the mode on the disc).
→ The mode change will be indicated on the player front display.

Playing a Video CD

- Video CDs may have one or more TRACKS, and TRACKS may have one or more INDEXES.
- To make easy and convenient access, you can move between TRACKS and INDEXES.
- Some Video CDs have Play Back Control (PBC), which is a predefined playback sequence stored on the disc (see *Playback Control* section).

Playing a disc

- 1 Insert the disc and close the tray, playback starts automatically.
→ The number of tracks and the total playing time of the disc will appear on the TV screen and DVD player's display.
- 2 Press **PLAY**.
→ The current track number and its elapsed playing time will be displayed.
- 3 Playback will stop at the end of the disc.
- 4 To stop playback, press **STOP**.
- 5 Disc Resume feature is also applicable for VCDs and SVCDs (see "Smart Resume" section).

Playing a Super Audio CD

- Super Audio CDs contain only TRACKS
- Select tracks using the menubar on the TV screen or by pressing the numerical keys directly.
- If SACD-text or CD-text is available on the disc, it will be displayed on both the TV screen and player's front panel.
- Favourite Track Selection (FTS) programming is NOT possible on SACD discs.

Operation

English

English

General Features

Note:

– Unless stated, all operations described are based on remote control use. Some operations can be carried out using the menu bar on the TV screen.

Moving to another title/chapter

DVD **VCD** **SACD**

When a disc has more than one title/track or chapter, you can move to another title/chapter as follows:

- 1 Press **SYSTEM MENU**, then select **T** or **C** in the menu bar.
- 2 Press **▲** or numerical keys to select a title/chapter.

CD **SACD**

- 1 Press **▶▶▶** or **◀◀◀** briefly during playback to go to the next track or to return to the beginning of the current track respectively.
- 2 Press **◀◀◀** twice briefly to step back to the previous track.
- 3 To go directly to any track, enter the track number using the numerical keys (0-9).

Search

DVD **VCD** **SACD**

- 1 Select **FAST MOTION** in the menu bar and press **▼**.
- 2 Use the **◀▶** keys to select the required speed: -32, -8 or -4 (backward), or +4, +8, +32 (forward).
- 3 Select 1 to play the disc at normal speed again.
- 4 To exit **FAST MOTION** mode, press **PLAY** or **▲**.

CD **SACD**

- To search forward or backward through different speeds, you can also hold down **▶▶▶** or **◀◀◀** for more than two seconds.

Special VCD & SVCD Features

Playback Control (PBC)

- 1 Load a Video CD with PBC and press **PLAY**.
- 2 Go through the menu with the keys indicated on the TV screen until your chosen passage starts to playback. If a **PBC** menu consists of a list of tracks, you can select a track directly.
- 3 Enter your choice with the numerical keys (0-9).
- 4 Press **RETURN** to go back to the previous menu, if applicable on the menu.
- 5 You may also select **PBC OFF** under Personal Preferences.
→ When set to OFF, PBC menus are not activated for further playback.

Special CD, SACD & MP3 Features

CD text, SACD text and MP3 text

- 1 Some CD, SACD or MP3-CD discs may contain text information (eg. track name, album name, artist name etc.) which will appear on the DVD/SACD player and TV screen during playback.
- 2 By default, CD text display is set to ON.
- 3 To switch off the CD text display, press **DISPLAY** on the remote control during playback.
- 4 Press **DISPLAY** on the remote control again to switch on the text display mode.

VCD **CD** **SACD**

Repeat track/disc

- To repeat the current track, press **REPEAT**.
→ **REPEAT TRK** appears on the front display.
- To repeat the entire disc, press **REPEAT** a second time.
→ **REPEAT DISC** appears on the front display.
- To exit Repeat mode, press **REPEAT** a third time.

Repeat A-B **DVD** **VCD** **CD**

- **DVD-Video Discs: repeat a sequence in a title**
– **Video and Audio CDs: repeat a sequence in a track**
- 1 Press **REPEAT A-B** at your chosen starting point.
- 2 Press **REPEAT A-B** again at your chosen end point.

- **REPEAT A-B** appears briefly on the front display, and the repeat sequence begins.
- To exit the sequence, press **REPEAT A-B**.

Shuffle

DVD

This shuffles the playing order of chapters within a title, if the title has more than one chapter:
Press **SHUFFLE** during playback.

- 1 → **SHUFFLE** appears on the screen for about two seconds.
- 2 To return to normal playback, press **SHUFFLE** again.

VCD **CD** **SACD**

This shuffles the playing order of tracks within a disc, if the disc has more than one tracks.
Press **SHUFFLE** during playback.

- 1 → **SHUFFLE** appears on the screen for about two seconds.
- 2 To return to normal playback, press **SHUFFLE** again.

Repeat

DVD

Repeat chapter/title/disc

- To repeat the current chapter, press **REPEAT**.
→ **REPEAT CHP** appears on the front display.
- To repeat the current title, press **REPEAT** a second time.
→ **REPEAT TTL** appears on the front display.
- To repeat the entire disc, press **REPEAT** a third time.
- **REPEAT DISC** appears on the front display.
- To exit Repeat mode, press **REPEAT** a fourth time.

Operation

Erasing all selections

- While playback is stopped, select **VIDEO FTS** ☒ in the menu bar.
- Use **▼** to select **CLEAR ALL** and press OK.
- All selections will be erased.
- Press SYSTEM MENU to exit.

Note:
– Audio track programming function is not available for MP3-CD and SACD discs.

Auto Wake-up Timer

The wake-up timer allows your player to turn on after a preset time.

- Select  in the menu bar.
- Press **▼**.
- Time edit box will appear:
Use the **▲** or **▼** to select the sleep time. The maximum time you can select is 600 minutes.
- Selection is made by 30 minutes steps each time. Press OK to confirm the selection.
- 5 The Wake-up Timer will activate when the set is switched to standby-mode.

English

English

Operation

FTS Video/Audio Programme

- Favourite Track Selection (FTS) list contains up to 20 items (titles, chapters).
- The most recent programme list will be placed on top of the existing list.

Storing a Programme

- While playback is stopped, select **VIDEO FTS** ☒ in the menu bar.
- Press **▼** to open the menu bar.
- The **VIDEO FTS** ☒ menu appears.
- Press **▶** or **◀** or FTS (on the remote control) to select ON.

Storing titles/tracks

- Press **▼** to select **TITLES/TRACKS**.
- Use **▶** and **◀** to select the require title/tracks.
- Press OK to store the entire selected title/tracks.
- The title number will be added to the list of selections.

Storing chapters/indexes

- Press **▼** on the selected chapter/indexes number:
→ The chapter/indexes number will be highlighted.
- Use **▶** and **◀** to select the required chapter number.
- Press OK to confirm the selection.
→ The selected chapter/indexes confirmation will be added to the list of selections.
- Press SYSTEM MENU to exit the **VIDEO FTS** ☒ menu.

Erasing a selection in a Programme

- While playback is stopped, select **VIDEO FTS** ☒ in the menu bar.
- Use **▼** to select **PROGRAM**.
- Use **▶** and **◀** to select the required number.
- Press OK to erase the selection.
- Press SYSTEM MENU to exit.

Time search

The Time Search function allows you to start playing at any chosen time on the disc.

- Select  (TIME SEARCH) in the menu bar and press **▼**.
→ Playback will pause.
- The elapsed playing time is displayed in a time edit box.
- Enter hours, minutes and seconds from left to right in the time edit box using remote control numerical key pad.
→ Each time an item has been entered, the next item will be highlighted.
- Press OK to confirm the selected time.
→ The time edit box will disappear and playback starts from the selected time position on the disc.

- Press SYSTEM MENU to remove the menu bar.

Zoom

The Zoom function allows you to enlarge the video image and to pan through the enlarged image.

- Select  (ZOOM).
- Press **▲▼** to activate the **ZOOM** function and select the required zoom factor: 1.33 or 2 or 4.
→ Playback will continue.
- The selected zoom factor and 'Press OK to pan' appears below the menu bar:
→ The zoomed picture will appear on the TV screen.
- Press OK to confirm the selection.
→ The panning icon appears on the screen.
- Use the **◀▶▲▼** keys to pan across the screen.
- When OK is pressed only the panned picture will be shown on the screen.
- To exit **ZOOM** mode, select zoom factor to "Off" (zoom factor 1) in the menu bar.

English

English

Erasing all selections

- Use **▼** to select **CLEAR ALL** and press OK.
- All selections will be erased.

Note:
– Audio track programming function is not available for MP3-CD and SACD discs.

Auto Wake-up Timer

The wake-up timer allows your player to turn on after a preset time.

- Select  in the menu bar.
- Press **▼**.
- Time edit box will appear:
Use the **▲** or **▼** to select the sleep time. The maximum time you can select is 600 minutes.
- Selection is made by 30 minutes steps each time. Press OK to confirm the selection.
- 5 The Wake-up Timer will activate when the set is switched to standby-mode.

Access Control

Child Lock DVD

Activating/deactivating the Child Lock

- 1 When disc playback is stopped, select **ACCESS CONTROL** in the Personal Preferences menu using the **▲▼** keys.
- 2 Enter a 4-digit code of your own choice twice.
- 3 Move to **"CHILD LOCK"** using the **▲▼** keys.
- 4 Move to **1** / **0** using the **►** keys.
- 5 Select **0** using the **▲▼** keys.
- 6 Press **OK** or **◀** to confirm, then press **▶** again to exit the Personal Preferences menu.
- 7 Select **0** to deactivate the **CHILD LOCK**.

Notes:

- Confirmation of the 4-digit code is necessary when:
 - The code is entered for the very first time (see above).
 - The code is changed or cancelled (see "Changing the 4-digit code").

Authorising discs

- 1 Insert the disc.
- 2 The 'child safe' dialog will appear. You will be asked to enter your secret code for 'Play Once' or 'Play Always'.
- If 'Play Once', disc can be played when in the player and the player is ON.
- If 'Play Always', disc will become authorised and can always be played even if the Child Lock is set to ON.

Notes:

- The player memory can maintain 120 authorised ('Child safe') disc titles. A disc will be placed in the list when 'Play Always' is selected.

Operation

Album/Title

This feature allows you to view and select the next or previous MP3 disc Album/Title.

- 1 Press **▲▼** to scroll through the previous or next Album.
- 2 Press **◀▶** to scroll through the previous or next Track.
- 3 You can also select the desired album/track number directly using the numeric keys on the remote control.

Note:

- In **STOP mode: numbers are used for ALBUM selection.**
- In **PLAY mode: numbers are used for TRACK selection.**

| play | album | track | time |
|------|-------|-------|------|
| ▶ | 11 | 42 | 2:34 |

- Only the following functions are possible for MP3 discs:
 - STOP / PLAY / PAUSE
 - SKIP NEXT / PREVIOUS
 - REPEAT (TRACK / ALBUM / DISC)

MP3 Discs - Album/Track/Disc

- To repeat a track, press REPEAT.
- To REPEAT TRK appears on the player display.
- To repeat an album, press REPEAT a second time.
- To REPEAT ALB appears on the player display.
- To repeat the entire disc, press REPEAT a third time.
- To REPEAT DISC appears on the player display.
- To exit REPEAT mode, press REPEAT a fourth time.
- To REPEAT OFF appears on the player display.

MP3 Disc Features

Support following MP3-CD formats (ISO9660 format):

- Max. 30 characters
- Max. nested directory is 8 levels
- The max. ALB number is 32
- Supported VBR bit-rate
- Supported sampling frequencies for MP3 disc are: 32 kHz, 44.1 kHz, 48 kHz
- Supported Bit-rates of MP3 disc are: 32, 64, 96, 128, 192, 256 (kbps)

Following formats can't be supported

- The files like *.WMA, *.AAC, *.DFF, *.M3U, *.PLS
- Chinese filenames
- The non-session closed discs
- The discs recorded under UDF format

Downloading MP3 files from the Internet or copying songs from your own legal discs is a delicate process.

| Sound Quality | Bit Rate | Approximate total duration | Approximate total size | Comment |
|---------------|----------|----------------------------|------------------------|--------------------------------------|
| MP3 | 32 kbps | 40 hrs | 1.2 GB | Sound quality significantly affected |
| MP3 | 44 kbps | 30 hrs | 1.6 GB | Sound quality significantly affected |
| MP3 | 64 kbps | 20 hrs | 2.4 GB | Sound quality significantly affected |
| MP3 | 96 kbps | 15 hrs | 3.6 GB | Balanced sound quality |
| MP3 | 128 kbps | 10 hrs | 4.8 GB | Balanced sound quality |
| MP3 | 192 kbps | 7 hrs | 7.2 GB | Balanced sound quality |
| MP3 | 256 kbps | 5 hrs | 9.6 GB | Best sound quality |
| MP3 | 320 kbps | 4 hrs | 12.8 GB | Best sound quality |

You may experience an occasional "skip" while listening to your MP3 files. This is normal.

Additional note for MP3 disc Playback:

- In compliance with the SDMI, digital-out is muted while playing MP3 discs.
- Due to the recording nature of Digital Audio MP3 (DAM), only Digital Audio music will play.
- The disc reading time may exceed 10 seconds due to the large number of songs compiled onto one disc.
- For multi-session discs, only the first session will be available.

English

English

- Each time a 'child safe' disc is played, it will be placed on top of the list. When the list is full, the last disc in the list will be replaced when a new disc is added.
- Double-sided DVDs and multi-volume VCDs may have a different ID for each side. In order to make the disc 'child safe', each side has to be authorised.

Deauthorising discs

- 1 Insert the disc.
- 2 Playback starts automatically.
- Press **■** while **⊙** is visible.
- The **⊙** will appear and the disc is now deauthorised.

Parental Control DVD

Movies on DVDs may contain scenes not suitable for children. Therefore, discs may contain 'Parental Control' information which applies to the complete disc or to certain scenes on the disc. These scenes are rated from 1 to 8, and alternative, more suitable scenes are available on the disc. Ratings are country dependent. The 'Parental Control' feature allows you to prevent discs from being played by your children or to have certain discs played with alternative scenes.

Specifications

| English | |
|---|----------------------------------|
| English | |
| PLAYBACK SYSTEM | AUDIO PERFORMANCE (TYPICAL) |
| DVD/Video | 24 bits |

Access Control

- ### Activating/Deactivating Parental Control

 - When disc playback is stopped, select **ACCESS CONTROL** in the Personal Preferences menu using the **▲▼** keys.
 - Enter the current 4 digit code.
 - Move to **CHANGE CODE** using the **▼** and press the **►** key.
 - Enter the new 4-digit code.
 - Enter the code a second time and reconfirm by pressing OK.
 - Press **◀** to exit the menu.
 - The new 4 digit code will be take effect.
- ### If you forget your 4 digit code

 - Press **■** to exit the 'Child Safe' screen.
 - Select **ACCESS CONTROL** in the Personal Preferences menu using the **▲▼** keys.
 - The 4-digit code can be cancelled by pressing **■** four times in the 'Access Control' dialog.
 - You can then enter a new code (twice.) as described above in 'Changing the 4 digit code'.

- ### Parental Control Disclaimer

This DVD/SACD player features the **PARENTAL CONTROL** system which is to activate when playing DVD discs furnished with certain software coding only.

Also note that at the time of release of this DVD/SACD player certain aspects of the technical standards had not been settled between set makers and the disc industries.

On this basis, Philips cannot guarantee the functioning of the **PARENTAL CONTROL** system and denies any liability associated with unintended watching of disc content.

If in doubt, please make sure the disc plays according to your **PARENTAL CONTROL** settings before you allow children access to the player.
- When disc playback is stopped, select **ACCESS CONTROL** in the Personal Preferences menu using the **▲▼** keys.
 - Enter the 4 digit code.
 - Move to **CHANGE COUNTRY** using the **▼** key.
 - Press the **►** key.
 - Select a country using **▲▼**.
 - Press OK or **◀** to confirm, then press **◀** again to exit the menu.

Troubleshooting

English

Cleaning the Cabinet

- Use a soft cloth slightly moistened with a mild detergent solution. Do not use a solution containing alcohol, spirits, ammonia or abrasives.

Cleaning Discs

- When a disc becomes dirty, clean it with a cleaning cloth. Wipe the disc from the centre out. Do not wipe in a circular motion.
- Do not use solvents such as benzene, thinner, commercially available cleaners, or antistatic spray intended for analogue records.

Cleaning the disc lens

- After prolonged use, dirt or dust may accumulate at the disc lens. To ensure good playback quality, clean the disc lens with Philips CD Lens Cleaner or any commercially available cleaner. Follow the instructions supplied with the cleaner.

English

Problem

Solution

No sound or distorted sound

- Adjust the volume.
- Check that the speakers are connected correctly.

No audio at digital output

- Check the digital connections.
- Check the settings menu to make sure the digital output is set to ALL or PCM.
- Check if the audio format of the selected audio language matches your receiver capabilities.

No sound and picture

- Check that the SCART cable is connected to the correct device (See Connecting to a TV)

Disc can't be played

- Ensure the disc label is facing up.
- Check if the disc is defective by trying another disc.

Picture freezes momentarily during playback

- Check the disc for fingerprints/scratches and clean with a soft cloth wiping from centre to edge.

No return to start-up screen when disc is removed

- Reset the unit by switching the player off, then on again.

The player does not respond to the remote control

- Aim the remote control directly at the sensor on the front of the player.
- Reduce the distance to the player.
- Replace the batteries in the remote control.
- Re-insert the batteries with their polarities (+/- signs) as indicated.

Buttons do not work or player stops responding

- To completely reset the player, unplug the AC cord from the AC outlet for 5-10 seconds.

Player does not respond to some operating commands during playback.

- Refer to the instructions of the disc.

DVD/SA/CD Video player cannot read CDs/DVDs

- Use a commonly available cleaning CD/DVD to clean the lens before sending the DVD/SA/CD player for repair.

Troubleshooting

WARNING

Under no circumstances should you try to repair the system yourself, as this will invalidate the warranty. Do not open the system as there is a risk of electric shock.

If a fault occurs, first check the points listed below before taking the system for repair.

Problem

Solution

No power

- Check if the AC power cord is properly connected.

No picture

- Check if the TV is switched on.
- Check the video connection.

Distorted picture

- Sometimes a small amount of picture distortion may appear. This is not a malfunction.

Completely distorted picture or black/white picture with DVD/SA/CD or Video CD

- Make sure the NTSC/PAL setting at the DVD player matches the video signal of your television. (See NTSC/PAL Conversion/Settings)

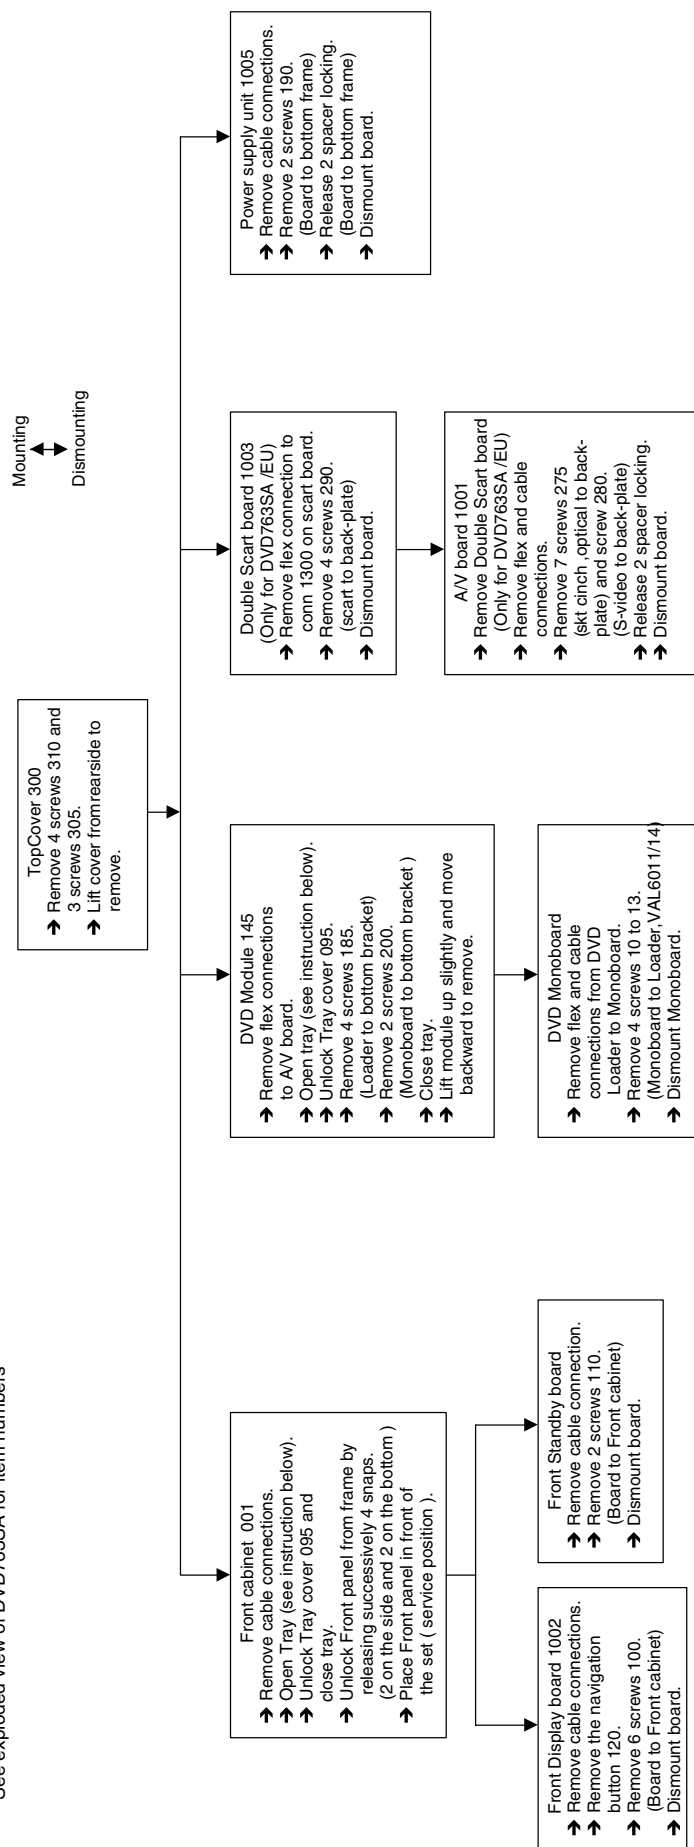

If you are unable to remedy a problem by following these hints, consult your dealer or service centre.

4. Mechanical- and Dismantling Instructions

Dismantling Instructions

DISMANTLING INSTRUCTIONS

See exploded view of DVD763SA for item numbers

Manually opening of tray

When it is not possible to open the tray with the EJECT button, the tray can be manually opened.
When no disc is loaded, unlock the tray by moving the slide from left to right and pull tray outwards.

When a disc is loaded, unlock the tray by pushing the slide inwards with a screwdriver and pull tray outwards.

Remove 4 screws to remove loader.

Figure 4-1 Exploded view

5. Diagnostic Software, Trouble Shooting and Test Instructions

5.1 Dealerscript

5.1.2 Contents of Dealer Script

5.1.1 Purpose of Dealer Script

The dealer script can give a diagnosis on a standalone DVD player, no other equipment is needed to perform a number of hardware tests to check if the DVD player is faulty. The diagnosis is simply a "error" or "pass" message. No indication is given of faulty hardware modules. Only tests within the scope of the diagnostic software will be executed hence only faults within this scope can be detected.

The dealer script executes all diagnostic nuclei that do not need any user interaction and are meaningful on a standalone DVD player.

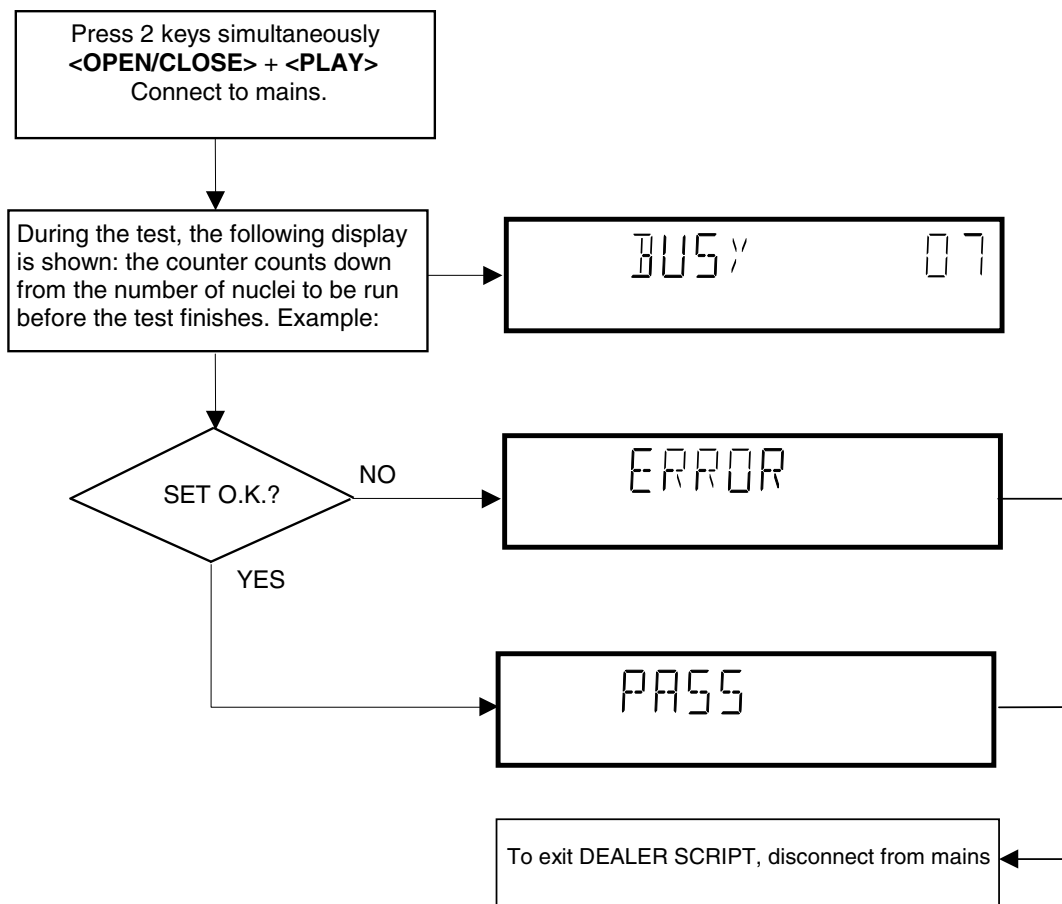

The nuclei called in the dealer script are the following (the number after each nucleus name corresponds with the number being on the local display when the nucleus is executed during the dealer script):

Nucleus

| Display Countdown | Nucleus Number | Nucleus Name | Description |
|-------------------|----------------|-------------------|--|
| 7 | 6 | PapChksFl | Calculate and verify checksum of FLASH memory |
| 6 | 12 | PapI2cDisp | Checks the I2C interface with the slave processor on the display board |
| 5 | 13 | PapS2bEcho | Checks the I2C interface to the basic engine |
| 4 | 11 | PapI2cNvram | Checks the I2C interface with the NVRAM |
| 3 | 15 | PapNvramWrR | Pattern test of all locations in the NVRAM |
| 2 | 16 | CompSdramWrR | Pattern test of all locations in the SDRAM(s) |
| 1 | 63 | FUORERSdramWrRLow | Pattern test of all locations in the SDRAM(s) |

CL 26532053_052.eps

Figure 5-1 Dealer script nuclei

CL 26532053_053.eps
150502

Figure 5-2 Dealer Script

5.2 Player Script

Press the OPEN/CLOSE key to proceed to the next test.

5.2.1 Purpose of Player Script

The Player script will give the opportunity to perform a test that will determine which of the DVD player's modules are faulty, to read the error log and error bits and to perform an endurance loop test. To successfully perform the tests, the DVD player must be connected to a TV set to check the output of a number of nuclei. For DVDv2b a multi-channel amplifier, a set of 6 speakers and an external video source are necessary to test. To be able to check results of certain nuclei, the player script expects some interaction of the user (i.e. to approve a test picture or a test sound). Some nuclei (e.g. nuclei that test functionality of the Basic Engine module) require that the DVD player itself is opened, to enable the user to observe moving parts and approve their movement visually. Only tests within the scope of the diagnostic software will be executed hence only faults within this scope can be detected.

5.2.2 Contents of Player Script

The player script contains all nuclei that are useful on a DVD player that is connected to a TV set and help to determine which module of the DVD player is faulty, as well as to read out the contents of the error logs.

5.2.3 Structure of Player Script

The player script consists of a set of nuclei testing the three hardware modules in the DVD player: the Display PWB, the Digital PWB, and the Basic Engine.

Nuclei run by the player test need some user interaction. In the next paragraph this interaction is described. The player test is done in two phases:

1. **Interactive tests:** this part of the player test depends strongly on user interaction and input to determine nucleus results and to progress through the full test. Reading the error log and error bits information can be useful to determine any errors that occurred recently during normal operation of the DVD player.
2. **The loop test:** this part of the player test will loop through the list of nuclei indefinitely, till the player is reset. The list of nuclei is as follows:
 - PapChksFlash
 - PapI2cNvram
 - CompSdramWrR
 - PapS2bEcho
 - PapI2cDisp

At the beginning of the tests, the DSW version number will be indicated on the local display of the DVD.

The display will look like the following:

Figure 5-3

Pressing the PLAY key will proceed to the slave S/W version display, which is shown on the local display of the DVD player. The display will look like the following:

Figure 5-4

5.2.4 Survey

Figure 5-5

5.3 Display PCB

5.3.1 Display Test

The display test is performed by nucleus DispDisplay. By putting a series of test patterns on the local display, the local display is tested. To step through all different patterns, the user must either press OPEN/CLOSE (pattern is ok) or STOP (pattern was incorrect) to proceed to the next pattern. The display of patterns is continued in a cyclic manner, shown in Fig. 5-6, until the user presses PLAY. If the user presses PLAY before all display patterns are tested, the DispDisplay nucleus will return FALSE (display test unsuccessful).

Figure 5-6

5.3.2 LED Test

The LED(s) on the DVD player is (are) tested by nucleus DispLed. The user must check if the LED(s) is (are) lighted; if it is, press OPEN/CLOSE, if it is not, press STOP. By pressing PLAY the script will proceed to the next test. If the user presses PLAY before OPEN/CLOSE or STOP, the DispLed nucleus will return TRUE (LED test successful).

5.3.3 Keyboard Test

The keyboard of the DVD player is tested by nucleus DispKeyb. The user is expected to press all keys on the local keyboard once. The code of the key pressed is shown on the local display (1 hexadecimal digit) immediately followed by a (hexadecimal) number indicating how many times that key has been pressed. Example of the local display during this test:

Figure 5-7

The key-codes displayed on the local display will scroll from right to left when the display gets full, the text "K" will remain on display.

| KEY ID | KEY |
|--------|--------------------|
| 0 | PLAY/PAUSE |
| 1 | STOP |
| 2 | OPEN/CLOSE |
| 3 | STANDBY |
| 4 | NEXT |
| 5 | PREVIOUS |
| 7 | SMART PICTURE |
| 8 | NAVIGATION -UP |
| 9 | NAVIGATION -DOWN |
| A | NAVIGATION - LEFT |
| B | NAVIGATION - RIGHT |
| C | DISC MENU |
| D | OK |
| E | SOUND |

CL 26532039_027.eps
203020

Figure 5-8

If any keys are detected more than once (due to hardware error), the key-code is displayed twice (or more), with the second digit increased by 1.

If the user does not press all keys minimally once (in any order), the DispKeys nucleus will return FALSE and cause an error in the overall result of the player script.

The user can leave the keyboard test by pressing the PLAY key on the local display of the DVD player for at least one full second.

The result of the keyboard test is shown on local display as follows:

Figure 5-9

Or

Figure 5-10

Pressing PLAY on the local keyboard again will proceed to the next text.

5.3.4 Remote Control Test

The remote control of the DVD player is tested by nucleus DispRc. The user must press any key on the remote control just once. The codes of the key pressed will be shown on the local display in hexadecimal format. Example:

Figure 5-11

In this example 23 is the hexadecimal code of the pressed RC key. The user can leave the remote-control test by pressing PLAY on the local keyboard of the DVD player. The remote control test is successful if a code was received before the user pressed the PLAY key. Pressing the PLAY key, before pressing a key on the remote control, gives an error in the remote control test (note that the remote control test will also fail if a key on the remote control was pressed but no code was received). The remote control test does not check upon the contents of the received code, that is it will not be checked if the received code matches the key pressed. If desired, the user can manually check this code by using a code-table for the remote control key-codes.

| RC Key id | Hexadecimal code |
|--------------|------------------|
| STANDBY | 0C |
| 1 | 1 |
| 2 | 2 |
| 3 | 3 |
| 4 | 4 |
| 5 | 5 |
| 6 | 6 |
| 7 | 7 |
| 8 | 8 |
| 9 | 9 |
| 0 | 0 |

| PREVIOUS | 21 |
| NEXT | 20 |
| STOP | 31 |
| PLAY | 2C |
| PAUSE | 30 |
| SUBTITLE | 4B |
| ANGLE | 85 |
| ZOOM | F7 |
| AUDIO | 4E |
| REPEAT | 1D |
| REPEAT A-B | 3B |
| SHUFFLE | 1C |
| SCAN | 2A |

CL 16532162_037.eps
080102

Figure 5-12

After pressing PLAY, the result of the remote control test is displayed on the local display of the DVD player as follows:

CL 96532065_013.eps
120799

Figure 5-13

Or

CL 96532065_014.eps
120799

Figure 5-14

Pressing PLAY on the local keyboard again will proceed to the next test.

5.3.5 P50 Loop-Back Test

For the P50 loop-back test, the user must first press a key to decide if the test is to be performed. The display will show the following message:

CL 16532007_004.eps
090102

Figure 5-15

If the user presses STOP, the P50 test will be skipped. If the user presses OPEN/CLOSE, the P50 test is performed and the result is displayed as follows:

Test successful:

CL 16532007_005.eps
090102

Figure 5-16

Test fails:

CL 16532007_006.eps
090102

Figure 5-17

Press the PLAY key to continue to the next text

5.4 Mono PCB Digital Part

5.4.1 Picture Test

The picture test is performed by putting a predefined picture (colour bar) on the display (nucleus VideoColDencOn), and asking the user for confirmation.

The display will show the following message:

Figure 5-18

By pressing OPEN/CLOSE the user confirms the test, pressing STOP will indicate the picture was invisible or incorrect. Pressing PLAY will proceed to the next test. If the user presses PLAY without pressing OPEN/CLOSE or STOP first, the result of this test will be TRUE (picture ok).

Note: The colour bar must be simultaneously available on the CVBS, YC, and RGB (or YUV) outputs available. On the SCART only the CVBS and RGB signals will be available.

5.4.2 Sound 1 & SCART DVD Test

The first soundtest is performed by starting a pink noise sound that needs confirmation from the user (nucleus AudioPinkNoiseOn).

The display will show the following message:

Figure 5-19

On the TV screen a colour bar (generated by nucleus VideoColDencOn) is visible and the internally generated pinknoise is audible.

By pressing the PLAY key, the user confirms the test. Pressing the STOP key will indicate the sound was inaudible or incorrect.

Note: Only for double scart models, SCART loop-through will be simultaneously active during this test. SCART loop-through will be measured with the aid of an external video source.

By pressing the PLAY key, there will be switched over to the external source. This must become now visible on the TV screen (using the SCART).

The local display will show the following message:

Figure 5-20

The internally generated colour bar is still available on the CVBS and Y/C outputs. And the pinknoise-signal is still available on the cinch audio outputs. By pressing the OPEN/CLOSE button, the internal generated colour bar becomes visual again.

The test can be left by pressing the PLAY key for more than one second.

5.4.3 Sound 2 Test

The second soundtest is performed by producing a sine sound (nucleus AudioSineOn). The signal can be stopped by pressing the STOP key.

The display will show the following message:

Figure 5-21

After the audio signal has been stopped, by pressing OPEN/CLOSE, the user confirms the test. Pressing STOP will indicate that something went wrong. Pressing PLAY will proceed to the next. If the user presses PLAY without pressing OPEN/CLOSE or STOP first, the result of this test will be TRUE (sound ok).

5.5 Basic Engine

5.5.1 Version Number

In the basic engine tests, the version number of the Basic Engine will be shown first, as the following example:

Figure 5-22

By pressing the PLAY key, the Basic Engine tests are started.

5.5.2 Tray Test

First, the tray is tested. The purpose of this test is also to give the user the opportunity to put a disc in the tray of the DVD player. Some tests on the Basic Engine require that a disc (e.g. DVD MPTD test disc) is present in the player. At the end of the Basic Engine tests this tray test will be repeated solely to enable the user to remove the disc in the tray. The local display will look as follows:

Figure 5-23

By pressing OPEN/CLOSE the user can toggle the position of the tray. Note that this test will not contribute to the test result of the Basic Engine. Pressing PLAY will proceed to the next test. At this point, the tray will be closed automatically by the software if it was open.

5.5.3 Sledge Test (Visual Test)

The second Basic Engine test tests the sledge. The user can move the sledge as many times as desired by using OPEN/CLOSE (nucleus BeSledgeOut) and STOP (nucleus BeSledgeIn). Pressing PLAY on the local keyboard proceeds to the next test. Note that this test will not contribute to the test result of the Basic Engine.

The local display will look as follows during the sledge test:

Figure 5-24

5.5.4 Disc Motor Test (Visual Test)

The third Basic Engine test tests the disc motor (nucleus BeDiscMotorOn).

The local display looks as follows:

Figure 5-25

By pressing OPEN/CLOSE the user confirms that the disc motor is running. Pressing STOP indicates the disc motor does not work. Pressing PLAY proceeds to the next test, after a reset of the disc motor (nucleus BeDiscMotorOff). If the user presses PLAY before pressing OPEN/CLOSE or STOP, the result of this test will be TRUE (disc motor is running).

5.5.5 Focus Test (Visual Test)

The fourth Basic Engine test tests the focussing. First focussing is turned on by calling nucleus BeFocusOn. The display will look as follows:

Figure 5-26

By pressing OPEN/CLOSE the user confirms that the focussing was successful. Pressing STOP indicates a focussing failure. Pressing PLAY proceeds to the next test after a reset of the focussing (nucleus BeFocusOff). If PLAY is pressed before OPEN/CLOSE or STOP, the result of this test will be TRUE (focus successful).

5.5.6 Radial Test (Visual & Listening Test)

The fifth Basic Engine test tests the radial functionality (nucleus BeRadialOn).

The local display looks as follows:

Figure 5-27

By pressing OPEN/CLOSE the user confirms that the radial function works. Pressing STOP indicates the function does not work. Pressing PLAY proceeds to the next test, after a reset of the radial (nucleus BeRadialOff). If the user presses PLAY before pressing OPEN/CLOSE or STOP, the result of this test will be TRUE (radial successful).

5.5.7 Jump Test (Listening Test)

The sixth and last Basic Engine test tests the jumping by calling nuclei BeGroovesIn, BeGroovesMid and BeGroovesOut.

During this test, the local display looks as follows:

Figure 5-28

The user can switch between the three different types of groove settings by pressing OPEN/CLOSE (forward to next nucleus in the list In-Mid-Out), or STOP (backward in the list In-Mid-Out). This is done in a cyclic manner; note that this test will not contribute to the test result of the Basic Engine. Pressing PLAY proceeds to the next test, after the disc motor has been shut off with a call to nucleus BeDiscMotorOff.

5.5.8 Tray Test

As a last action for the Basic Engine tests, the tray test is repeated. The local display will look as follows:

Figure 5-29

This test is meant to give the user the opportunity to remove the disc in the tray. The tray position can be toggled using the OPEN/CLOSE key. The tray will be closed (by the software, if it is open) before proceeding to the next test when the user presses the PLAY key.

5.5.9 Error Log (See Table on Page 25)

Reading the error log and error bits information can be useful to determine any errors that occurred recently during normal operation of the DVD player. Reading the error log is done by nucleus LogReadErr. The display during the errorlog readout looks as follows :

Figure 5-30

Note: Previous versions of the diagnostic software showed a 8-digit error code. Due to limitations in the number of digits that can be displayed by some front panel displays, the most significant digits will not be shown. This can be done since all the error codes used by this player has set these 2 digits to "00"

By pressing OPEN/CLOSE or STOP the user can move forward or backward (respectively) through the logged error codes. If "0000" is displayed at all positions, the error log is empty. Display of the logged errors is done in a cyclic manner. By pressing PLAY on the local keyboard, the user can proceed to the next test.

5.5.10 Error Bits

Reading the error bits is done by nucleus LogReadBits. The display during the errorbits readout looks as follows:

Figure 5-31

Only the identification number (decimal) representing set errorbits will be shown. By pressing OPEN/CLOSE or STOP, the user can move forward or backward (respectively) through the logged errorcodes. If the display only shows "EB-0", no error bits were set. By pressing PLAY the user can continue to the next test.

5.6 Loop Test (See Table Below)

At the start of the loop test, the local display of the DVD player will show the interactive player test result readout in the following display:

Figure 5-32

The left side of the display contains a 3-digit code, which can have a value between 000 and 111. These values indicate the faulty modules and are to be interpreted as follows:

| Displayed Value | Indication for each module | | |
|-----------------|----------------------------|----------|-------------|
| | Basic Engine | Mono PCB | Display PCB |
| 000 | ok | ok | ok |
| 001 | ok | ok | faulty |
| 010 | ok | faulty | ok |
| 011 | ok | faulty | faulty |
| 100 | faulty | ok | ok |
| 101 | faulty | ok | faulty |
| 110 | faulty | faulty | ok |
| 111 | faulty | faulty | faulty |

Figure 5-33

The loop test will perform the same nuclei as the dealer test, but it will loop through the list of nuclei indefinitely. The display of the DVD player will display not only the three digits indicating correct/faulty modules and the last found error code (as mentioned, faults are detected as far as they can be within the scope of the diagnostic software), but also a loop counter indicating how many times the loop has been gone through. If an error was detected, the display will remain as in figure 5-34 until the user presses the PLAY key and then it will continue to the next loop. Example:

Figure 5-34

The 2-digit number (23) on the right of figure 5-32 indicates the number of times the loop test has been performed.

After one loop cycle: Display the 3-digit module bits together with the last error code which occurred in the loop test. The 4 digits at the right side of the display (fig. 5-34) show the last error that was found during the loop test. The leftmost two digits (54) of this code indicates which nucleus resulted in a fault. The rightmost two digits (03) refer to the faultcode within that nucleus. For further explanation of this error code, refer to chapter 5.8 (Nuclei Error Codes).

5.6.1 Errorlog

Explanation:

The application errors will be logged in the NVRAM. The maximum number of error bytes that will be visible is 16. The first word (4 digits) of the byte is the component identification, the last word is the error code.

The diagnostics software will present a combination of this component identification plus an error code on the local display (and on the attached terminal). The last reported error is shown as < 00000000, the oldest visible error as 00000000 > and the errors in between as < 00000000 >.

The devices that may report errors are the serial controller (UART), the basic engine (BE), the slave processor (SLPH), the SACD Stream Manager (SSM) and the SACD Media Access (SMA). The identification of these components is as follows:

| Component name | Component identification |
|---------------------------|--------------------------|
| Serial controller (UART) | 000A |
| Engine (BE) | 0016 |
| Slave Processor (SLPH) | 001A |
| SACD Stream Manager (SSM) | 001C |
| SACD Media Access (SMA) | 002E |
| Diagnostic software (DS) | Dxxx |

The tables in the next chapters list the error code and corresponding problem. The column 'Explanation' holds a more elaborate description and the most likely reason for the error.

Some Examples:

002E0000 (SMA reported a timeout error)

0016010A (Engine could not fully close or open the tray)

D0010001 (Flash checksum failed).

For further explanation of DS errors, see description of nuclei error codes in paragraph 5.8.

UART Error Codes

| Error Number | Error name | Explanation |
|--------------|-------------------|---|
| 0000 | BUF_OVE RFLOW | To many characters were offered in too little time. Reason: system was too busy doing other jobs. |
| 0001 | COMMUNI CATION | Usually a protocol error. Reason: bad connection between engine and processor. |
| 0002 | TIME OUT | |

BE Errors

| Error Number | Error name | Explanation |
|--------------|---------------------|--|
| 0101 | S2B_ILL_CO MMAND | Parameter(s) not valid for this command. Reason: some communication problem between UART and engine. |
| 0102 | S2B_ILL_PAR AM | Command not allowed in this state or unknown. Reason: see S2B_ILL_COMMAND error |

| Error Number | Error name | Explanation |
|--------------|-------------------------|---|
| 0103 | S2B_SLEDGE | Sledge could not be moved to home position. |
| 0104 | S2B_FOCUS | Focus failure |
| 0105 | S2B_MOTOR | Motor could not reach speed within timeout |
| 0106 | S2B_RADIAL | Servo didn't get on track after several retries. |
| 0107 | S2B_PLL_LO CK | PLL could not lock in Accessing or Tracking state |
| 0108 | SBC_HEADE R_TO | Header timeout |
| 0109 | S2B_SBC_NO T_FOUND | Requested subcode item could not be found. |
| 010A | S2B_TRAY | Tray could not be opened or closed completely. |
| 010B | S2B_TOC_RE AD | TOC could not be read within timeout period. |
| 010C | S2B_JUMP | Requested seek could not be performed. |
| 010D | S2B_NON_EX IST_SES | Attempt to access a non-existing session. |
| 010E | S2B_NON_EX IST_BCA | Caller tries to acces a non-existing BCA area |
| 010F | Speed setting | A wrong or inappropriate speed value has been set |
| 0116 | NO_DISC | No disc selected |
| 011A | TRAY_INIT | After reset, initialized tray |
| 011B | NO TOC INFO | No TOC information in lead-in area or erase TOC found |
| 01F0 | S2B_OVERR UN | Too many bytes received over S2B Reason: see S2B_ILL_COMMAND error |
| 01F1 | S2B_COMM_ TO | Not enough bytes are received over S2B Reason: see S2B_ILL_COMMAND error |
| 01F2 | S2B_PARITY | Byte received with parity error. Reason: see S2B_ILL_COMMAND error |
| 01F3 | S2B_ILL_PHA SE | CMD IDC is not valid, transmission out of sync. Reason: see S2B_ILL_COMMAND error |
| 01F4 | S2B_ILL_NR_ OF_BYTES | Byte count has an illegal value. Reason: see S2B_ILL_COMMAND error |

SLPH Error Codes

| Error Number | Error name | Explanation |
|--------------|-------------------|--|
| 0000 | COMMUNICA TION | Error in I2C communication. Reason: bad connection between slave processor and main processor. |

SSM Error Codes

| Error Code | Error name | Explanation |
|------------|------------------|---|
| 0006 | SP_SYNCER ROR | System cannot get synchronised with sectors coming from disc. Reason: Usually a damaged disc or the player was dropped/pushed during operation. If not, the engine is malfunctioning. |
| 0007 | SP_EDCERR OR | Data coming from disc is damaged. Reason: see SP_SYNCERROR |

| Error Code | Error name | Explanation |
|------------|---------------------|---|
| 0008 | SP_CONTINUITYERROR | Sequence of sectors coming from disc is incorrect. Reason: see SP_SYNCERROR |
| 0009 | DMX_CONTINUITYERROR | Sequence of sectors is incorrect. Reason: problem with buffer RAM |
| 000A | LLD_ERROR | An illegal audio format was offered to the decoder. Reason: unknown audio type on disc or problem with buffer RAM |
| 000B | BCU_ERROR | Internal problem in Furore chip |

SMA Error Codes

| Error Number | Error name | Explanation |
|--------------|------------------|--|
| 0000 | SMA_TIMEOUTERROR | Data coming from disc not in time. Reason: damaged disc or engine problem. |

5.6.2 Reprogramming of New Mono Boards.

Caution

This information is confidential and may not be distributed. Only a qualified service person should reprogram the mono board.

After reset of NV-memory or repair of the mono board, all the customer settings and also the region code will be lost.

Reprogramming of the mono board will put the player back in the state in which it has left the factory, i.e. with the default settings and the allowed region code.

Reprogramming is limited to 25 times

When the counter reaches 25, reprogramming is not possible anymore

Reprogramming will be done by way of the remote control.

Put the player in stop mode, no disc loaded.

Press the following keys on the remote control:

<PLAY> followed by numerical keys <1> <5> <9>

The display shows: “-----”

Press now successively the following keys :

for DVD763SA /001 /021 /051 : <2><2><2> <0><0><8><0><0>

Press <PLAY> again.

The TV screen will become BLUE during a short time to confirm that the mono board has been reprogrammed.

Figure 5-35 Reprogramming code

5.6.3 Trade Mode

When the player is in Trade Mode, the player cannot be controlled by means of the front key buttons, but only by means of the remote control.

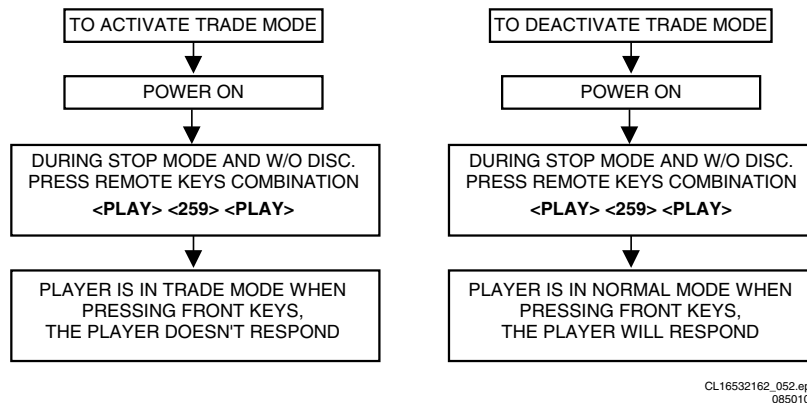

Figure 5-36

Note: To activate and deactivate the Trade Mode with the disc in the player, the procedure is similar to above, except that the remote control keys combination is pressed at the instant when the local display is flashing “READING”

5.7 Menu and Command Mode Interface

5.7.1 Layout of Results Diagnostic Nuclei

Results returned from a Diagnostic Nucleus will be displayed in the following layout:

< number >< string > [ok | ER]

< number >: is a 4-digit decimal number padded with leading zeros if its value is less than 4 digits. The first 2 digits identify the generating nucleus (or group of nuclei) while the latter 2 digits indicate the error number.

< string >: is a text string containing information about the result of the Diagnostic Nucleus.

< number > and < string > are defined in [SSD_DN] in the output sections of each Nucleus.

Examples:

- 0001Unknown command ER @
- 3100OK @
- 0901Data line X is not connected to the DRAM ER@

5.7.2 Command Mode Interface

Set-up Physical Interface Components

Hardware required:

- Service PC
- one free COM port on the Service PC
- special cable to connect DVD player to Service PC

The service PC must have a terminal emulation program (e.g. OS2 WarpTerminal or Procomm) installed and must have a free COM port (e.g. COM1). Activate the terminal emulation program and check that the port settings for the free COM port are: 19200 bps, 8 data bits, no parity, 1 stop bit and no flow control. The free COM port must be connected via a special cable to the RS232 port of the DVD player. This special cable will also connect the test pin, which is available on the connector, to ground (i.e. activate test pin).

Code number of PC interface cable: 3122 785 90017

Activation

Switch the player on and the following text will appear on the screen of the terminal (program):

```

DVDv4 Diagnostic Software version 5.03
(M)enu, (C)ommand or (S)2B interface ? [M]:@ m <enter>

SDRAM Interconnection test passed
Basic SDRAM test passed
Slave Processor: SLAVE2

DD:>
  
```

CL 26532053_057.eps
150502

Figure 5-37

The first line indicates that the Diagnostic software has been activated and contains the version number. The second line lets the user choose the interface format. Enter 'C' to select Command Mode and the next three lines are the successful result of the two subsequent basic tests (nuclei 2, 4 and the detection of the display type used by the panel respectively). If not all these messages appear on the terminal screen, then the related nucleus found an error. The last line is the prompt ("DD>"). The diagnostic software is now ready to receive commands.

Command Overview of Nuclei

The following table gives an overview of all available nuclei. The first column contains an identification number, the second contains the name of a nucleus and the last column indicate the description of the nucleus.

Note: User confirmation is necessary during front panel tests

Table 5-1 Basic diagnostic nuclei

| Ref. # | Reference Name | Remark |
|--------|--------------------|---|
| 1 | BasicSpAcc | Serial port Access test/ initialization |
| 2a | BasicInterconDram | Data and address bus Interconnection (only for development) |
| 2b | BasicInterconSdram | Data and address bus interconnection |
| 3 | BasicDramWrR | DRAM Write Read (only for development) |
| 4 | BasicSdramWrR | SDRAM Write Read |

Table 5-2 Processor and peripherals

| Ref. # | Reference Name | Remark |
|--------|-----------------|---|
| 6 | PapChksFl | Checksum FLASH |
| 7a | PapUclkAckCdda | uClock A_CLK in CD-DA mode |
| 7b | PapUclkAckDvd | uClock A_CLK in DVD mode |
| 7c | PapUclkAckDvd96 | uClock A_CLK in DVD (96kHz) mode |
| 10 | PapFlashWrAcc | FLASH Write Access (only for development) |
| 11 | PapI2cNvram | I2C NVRAM access |
| 12 | PapI2cDisp | I2C Display PWB |
| 13 | PapS2bEcho | S2B Echo |
| 14 | PapS2bPass | S2B Pass-through |
| 15 | PapNvramWrR | NVRAM Write Read |
| 62 | PapChksSum | Show checksums stored in flash |

Table 5-3 Components

| Ref. # | Reference Name | Remark |
|--------|----------------|------------------|
| 16 | CompSdramWrR | SDRAM Write Read |

Table 5-4 Audio

| Ref. # | Reference Name | Remark |
|--------|-------------------|--|
| 19a | AudioMuteOn | Audio Mute On |
| 19b | AudioMuteOff | Audio Mute Off |
| 20a | AudioPinkNoiseOn | Audio Pinknoise On |
| 20b | AudioPinkNoiseOff | Audio Pinknoise (or beep tone) Off |
| 20c | AudioBeepToneOn | Audio Beep Tone On |
| 21a | AudioSineOn | Audio Sine signal On/Off |
| 21b | AudioSineBurst | Audio Sine signal Burst |
| 56a | AudioLfePortHigh | Set the LFE_SEL port to HIGH |
| 56b | AudioLfePortLow | Set the LFE_SEL port to LOW |
| 65 | DAC_I2C | Resets DAC and check I2C communication with DAC |
| 66a | DAC_I2CEnable | Enable I2C communication to AV board |
| 66b | DAC_I2CDisable | Disable I2C communication to AV board |
| 67a | DAC_ClockInternal | Uses internal clock from monoboard for DAC (256fs) |
| 67b | DAC_ClockExternal | Uses external clock for DAC (384fs) |

| Ref. # | Reference Name | Remark |
|--------|-------------------------|-------------------------------------|
| 68a | DAC_AudioPreMuteOn | Enable Audio Pre-mute pin |
| 68b | DAC_AudioPreMuteOff | Disable Audio Pre-mute pin |
| 69a | DAC_CenterOn | Enable Center on pin |
| 69b | DAC_CenterOff | Disable Center on pin |
| 79 | DAC_Reset | Resets DAC |
| 80a | DAC_ModeCDDA | Sets DAC to CDDA mode |
| 80b | DAC_ModeDVD48 | Sets DAC to DVD mode (48kHz) |
| 80c | DAC_ModeDVD96 | Sets DAC to DVD mode (96kHz) |
| 80d | DAC_ModeDSD | Sets DAC to DSD mode |
| 81a | DAC_LowPowerStandby On | Enable Low Power Standby |
| 81b | DAC_LowPowerStandby Off | Disable Low Power Standby |
| 82a | DAC_UpsamplingFreq192k | Sets Upsampling frequency to 192kHz |
| 82b | DAC_UpsamplingFreq96k | Sets Upsampling frequency to 96kHz |
| 82c | DAC_UpsamplingOn | Enable upsampling |
| 82d | DAC_UpsamplingOff | Disable upsampling |

Table 5-5 Video

| Ref. # | Reference Name | Remark |
|--------|-------------------------|---|
| 17a | VidPortOutAA | Output the value 0XAA at the Digital Video Interface Port |
| 17b | VidPortOut55 | Output the value 0X55 at the Digital Video Interface Port |
| 23a | VideoColDencOnPAL | Colourbar (PAL) DENC On |
| 23b | VideoColDencOff | Colourbar DENC Off |
| 23c | VideoColDencOnNTSC | Colourbar (NTSC) DENC On |
| 24a | VideoProgMPEGon | Progressive - DigitalVideo Colour Bar ON |
| 24b | VideoYuvMPEGon | Enhanced YUV-DigitalVideo Colour Bar |
| 25a | VideoScartLo | Scart Low |
| 25b | VideoScartMi | Scart Medium |
| 25c | VideoScartHi | Scart High |
| 54 | VideoScartSwComm | Scart Switch communication |
| 55a | VideoScartSwDvd | Scart Switch Dvd |
| 55b | VideoScartSwPass | Scart Switch Pass-through |
| 57a | VideoScartPinLo | PIO-pins as used in 2A for Scart-switching |
| 57b | VideoScartPinMi | PIO-pins as used in 2A for Scart-switching |
| 57c | VideoScartPinHi | PIO-pins as used in 2A for Scart-switching |
| 61a | VideoColOutRGB (ST5508) | Output RGB from ST5508 |
| 61b | VideoColOutYUV (ST5508) | Output YUV from ST5508 |

Table 5-6 Display (slave processor)

| 58c | LaserDvdOn | DVD Laser on |
| 58d | LaserDvdOff | DVD Laser off |
| 70 | BedReadFlashID | Read flash memory manufacturer and device ID |
| 71 | BedCalcRomChecksum | Calculate ROM checksum |
| 72 | BedScratchTest | Test scratch detection circuit |

Table 5-10 Furore IC

| Ref. # | Reference Name | Remark |
|--------|----------------------|--|
| 62 | Furore_SdramWrR | Furore SDRAM Write Read test |
| 63 | Furore_SdramWrR Fast | Furore SDRAM interconnection test |
| 64 | Furore_Id | Furore version ID check |
| 83 | Furore_Reset | Furore reset |
| 84a | Furore_High | Sets Furore output pins DSD_PCM0-9 to high |
| 84b | Furore_Low | Sets Furore output pins DSD_PCM0-9 to low |

Table 5-11 Karaoke (not available)

| Ref. # | Reference Name | Remark |
|--------|-----------------|--|
| 48a | KaraokeModeOff | Switch Karaoke mode off |
| 48b | KaraokeModeOn | Switch Karaoke mode on |
| 49 | KaraokeMicInput | Check path from the microphone input to audio output |
| 50a | KaraokeKeyOn | Set Karaoke Key to the maximum level (1200 cent) |
| 50b | KaraokeKeyOff | Set Karaoke Key to flat octave (0 cent) |
| 51a | KaraokeEchoOn | Set Echo Control function on |
| 51b | KaraokeEchoOff | Set Echo Control function off |

5.7.3 Menu Mode Interface

Activation

Switch the player on and the following text will appear on the screen of the terminal (program):

```

DVDv4 Diagnostic Software version 5.03

(M)enu, (C)ommand or (S)2B interface ? [M]:@ <enter>

SDRAM Interconnection test passed
Basic SDRAM test passed
Slave Processor: SLAVE2

Press ENTER to go to main menu
CC: > <enter>

MAIN MENU

1. Audio ...
2. Video ...
3. Front Panel ...
4. Basic Engine ...
5. Processor Peripherals ...
6. Error Log ...
7. Miscellaneous ...

Select >
CL 26532053_058.eps
150502

```

Figure 5-38 Screen menu

The first line indicates that the Diagnostic software has been activated and contains the version number. The next lines are the successful result of the SDRAM interconnection test and the basic SDRAM test. The last line allows the user to choose between the four possible interface forms. If pressing M has made a choice for Menu Interface, the Main Menu will appear.

Layout of Menu and Submenu

The following menu layout will appear after starting up the DVD player in menu mode. The symbol “- - -” indicates that the current menu choice will invoke the display of a submenu. The number between [] indicates the nucleus number. These numbers will not be shown on the screen.

| 8301 | "Invalid Version ID read. " |
| 8400 | "Test successful" |
| 8420 | "Test successful" |

5.9 Test Instruction Front Display and Audio/ Video Board

These test instruction is designed specifically for SACD 2002 single disc models which has the following outputs:

- 6 Channel Audio output
- Coaxial / Optical digital output
- CVBS
- Component output YUV
- SVHS
- Double SCART output
- Front Display

5.9.1 General

- All the waveforms measurement carried out in these test instruction will be base on the testpoint indicated in the A/V Board and Front Display schematic diagram in the Service manual.
- Impedance of the measuring-equipment should be > 1MΩ
- Most of the tests can be done using either the Diagnostic software "Player script" which can be found in the chapter "Diagnostic Software description and troubleshooting" or the Menu interface using the Service PC with a terminal emulation program (e.g. Window Hyperterminal) where it is possible to control the execution of the Diagnostic Nuclei
- Setup for the measurement will be done in set level with all modules connected as shown in the Wiring Block diagram.

5.9.2 General Start-Up Measurement

Supply Check:

Before starting the measurement,ensure that all power supply are connected to the A/V and Front Display board via conn.1420 and 1127 respectively.

| Pin nr. | A/V Board | Front Display |
|---------|------------|---------------|
| Voltage | Conn. 1420 | Conn. 1127 |
| 1 | +3V3_Power | - |
| 2 | +3V3_Power | - |
| 3 | GND | - |
| 4 | +12V_Power | - |
| 5 | +12VSTBY | - |
| 6 | GND | +5VSTBY |
| 7 | +5VSTBY | +12V_Power |
| 8 | GND | -32V_Power |
| 9 | -12V_Power | - |
| 10 | GND | - |
| 11 | -32V_Power | - |
| 12 | | - |

Clock Check

Ensure the present of the clock to the DAC and the slave μP.

| Clock Name | Testpoint | Frequency |
|------------|-----------|------------------------------|
| PCM_CLK | I117 | 11.2896MHz ± 0.02% tolerance |
| XOUT | S1 | 8MHz ± 0.2% tolerance |

Audio Mute Check

Measure the Audio mute voltage input at pin 22 of connector 1421

| Status | Value |
|--------------|------------|
| AudioMuteOn | HIGH (>3V) |
| AudioMuteOff | LOW (<3V) |

To toggle between ON and OFF,use the following commands:

| Ref.# | Command Name | Remarks |
|-------|--------------|----------------|
| 19a | AudioMuteOn | Audio Mute On |
| 19b | AudioMuteOff | Audio Mute Off |

5.9.3 Audio DAC And Amplifier

Ensure that the Audio mute signal is OFF

To check the DAC and buffer amplifier,send the following commands.

| Ref.# | Command Name | Remarks | Audio output |
|-------|-------------------|-----------------------|--------------------------|
| 21a | AudioSineOn | Audio Sine signal ON | Sine,1Khz on stereo |
| ---- | Press stop button | Audio Sine signal OFF | No waveform |
| 20a | AudioPinkNoiseOn | Audio Pinknoise ON | Pink Noise on 6 channels |
| 20b | AudioPinkNoiseOff | Audio Pinknoise OFF | No waveform |

The audio signal (sine or pink noise) will also be present on the digital output (SPDIF).This can be checked by connecting digital signal to an amplifier with digital input.

Check the I2S and audio signal at the following testpoints:

| Name | Testpoint |
|--------------------|-------------|
| PCM_LRCLK | I115 |
| PCM_SCLK | I116 |
| PCM_CLK | I117 |
| SDT1 | I114 |
| SDT2 | I112 |
| SDT3 | I110 |
| DIG_OUT | I499 |
| STEREO L/R OUT | I330 / I333 |
| FRONT L/R OUT | I336 / I339 |
| SURROUND L/R OUT | I348 / I351 |
| CENTRE OUT | I345 |
| SUB WOOFER L/R OUT | I342 |

All waveforms can be refered to the A/V board schematic diagram.

5.9.4 Video Output And Buffer Amplifier

Check DC output-level at all video cinch output : 1.0V DC ± 10%

Generate a color bar using the following software commands:

| Ref.# | Command Name | Remarks |
|-------|-----------------|--------------------|
| 23a | VideoColDencOn | Colour DENC ON |
| 23b | VideoColDencOff | Colourbar DENC OFF |

Check the video outputs at the following testpoints:

| Name | Testpoint |
|---------------|-----------|
| GREEN_Y | I502 |
| BLUE_U | I491 |
| RED_V | I494 |
| CVBS out_Mono | I480 |
| C_Mono | I483 |
| Y_Mono | I482 |

Il waveforms can be refered to the A/V board schematic diagram.

5.9.5 Play and 16/9 Detection

Check DC voltage at S-VIDEO-CHROMA output (pin 4) with a 6k8 ohm load and SCART connector 1403 (pin 16) and change the SCART0 and SCART1 input using the following commands:

| Ref.# | Command Name | Remarks |
|-------|--------------|---------------------|
| 25a | VideoScartLo | Sends out 0V ± 0.5V |
| 25b | VideoScartMi | Sends out 6V ± 10% |

| Ref.# | Command Name | Remarks |
|-------|--------------|-------------------------|
| 25c | VideoScartHi | Sends out 12V \pm 10% |

5.9.6 Kill Circuit

To check the functionality of the Kill circuitry, the audio outputs has to be present by the following command:

| Ref.# | Command Name | Remarks | Audio output |
|-------|--------------|-------------------|--------------|
| 21a | AudioSineOn | Audio Sinewave ON | 1kHz tone |

Check the audio outputs at the audio cinch of the A/V and SCART board: 1kHz tone.

Activate the Kill circuit by using the following command:

| Ref.# | Command Name | Remarks |
|-------|--------------|---------------|
| 19a | AudioMuteOn | Audio Mute On |

Check the audio outputs at the audio L/R cinch and SCART of the A/V and SCART board respectively:

No waveform

Switch off the kill circuit by using the following command:

| Ref.# | Command Name | Remarks |
|-------|--------------|----------------|
| 19b | AudioMuteOff | Audio Mute Off |

Check the audio outputs at the audio L/R cinch and SCART of the A/V and SCART board: 1kHz tone

5.9.7 Digital Silence

Digital silence is a signal from the audio DAC, MFL, when there is no input to the audio DAC, or when the player is in STOP/ PAUSE mode, or during disc changing track.

To check the MFL signal, use the following command and check the voltage level at pin 41 of 7200:

| Ref.# | Command Name | Remarks | KILL_LR signal |
|-------|-------------------|-----------------------|----------------|
| 21a | AudioSineOn | Audio Sinewave ON | LOW (<0.3V) |
| --- | Press STOP button | Audio Sine signal OFF | HIGH (>4.5V) |

5.9.8 Front Display

To check the segment display of the FTD, the following command can be used. And for full detail description of the test, refer to the chapter of "Diagnostic Software Player Script" which can be found in chapter "Diagnostic Software Description and Troubleshooting"

| Ref.# | Command Name | Remarks |
|-------|--------------|-----------------------|
| 30a | DispDisplay | Turn ON local display |

5.9.9 IR Receiver

Check at pin 22 of 7101 and observe if this line switches from LOW (<0.3V) to HIGH (>4.5V) when pressing a key on a philips RC5 or RC6 remote control

5.9.10 P50 Interface

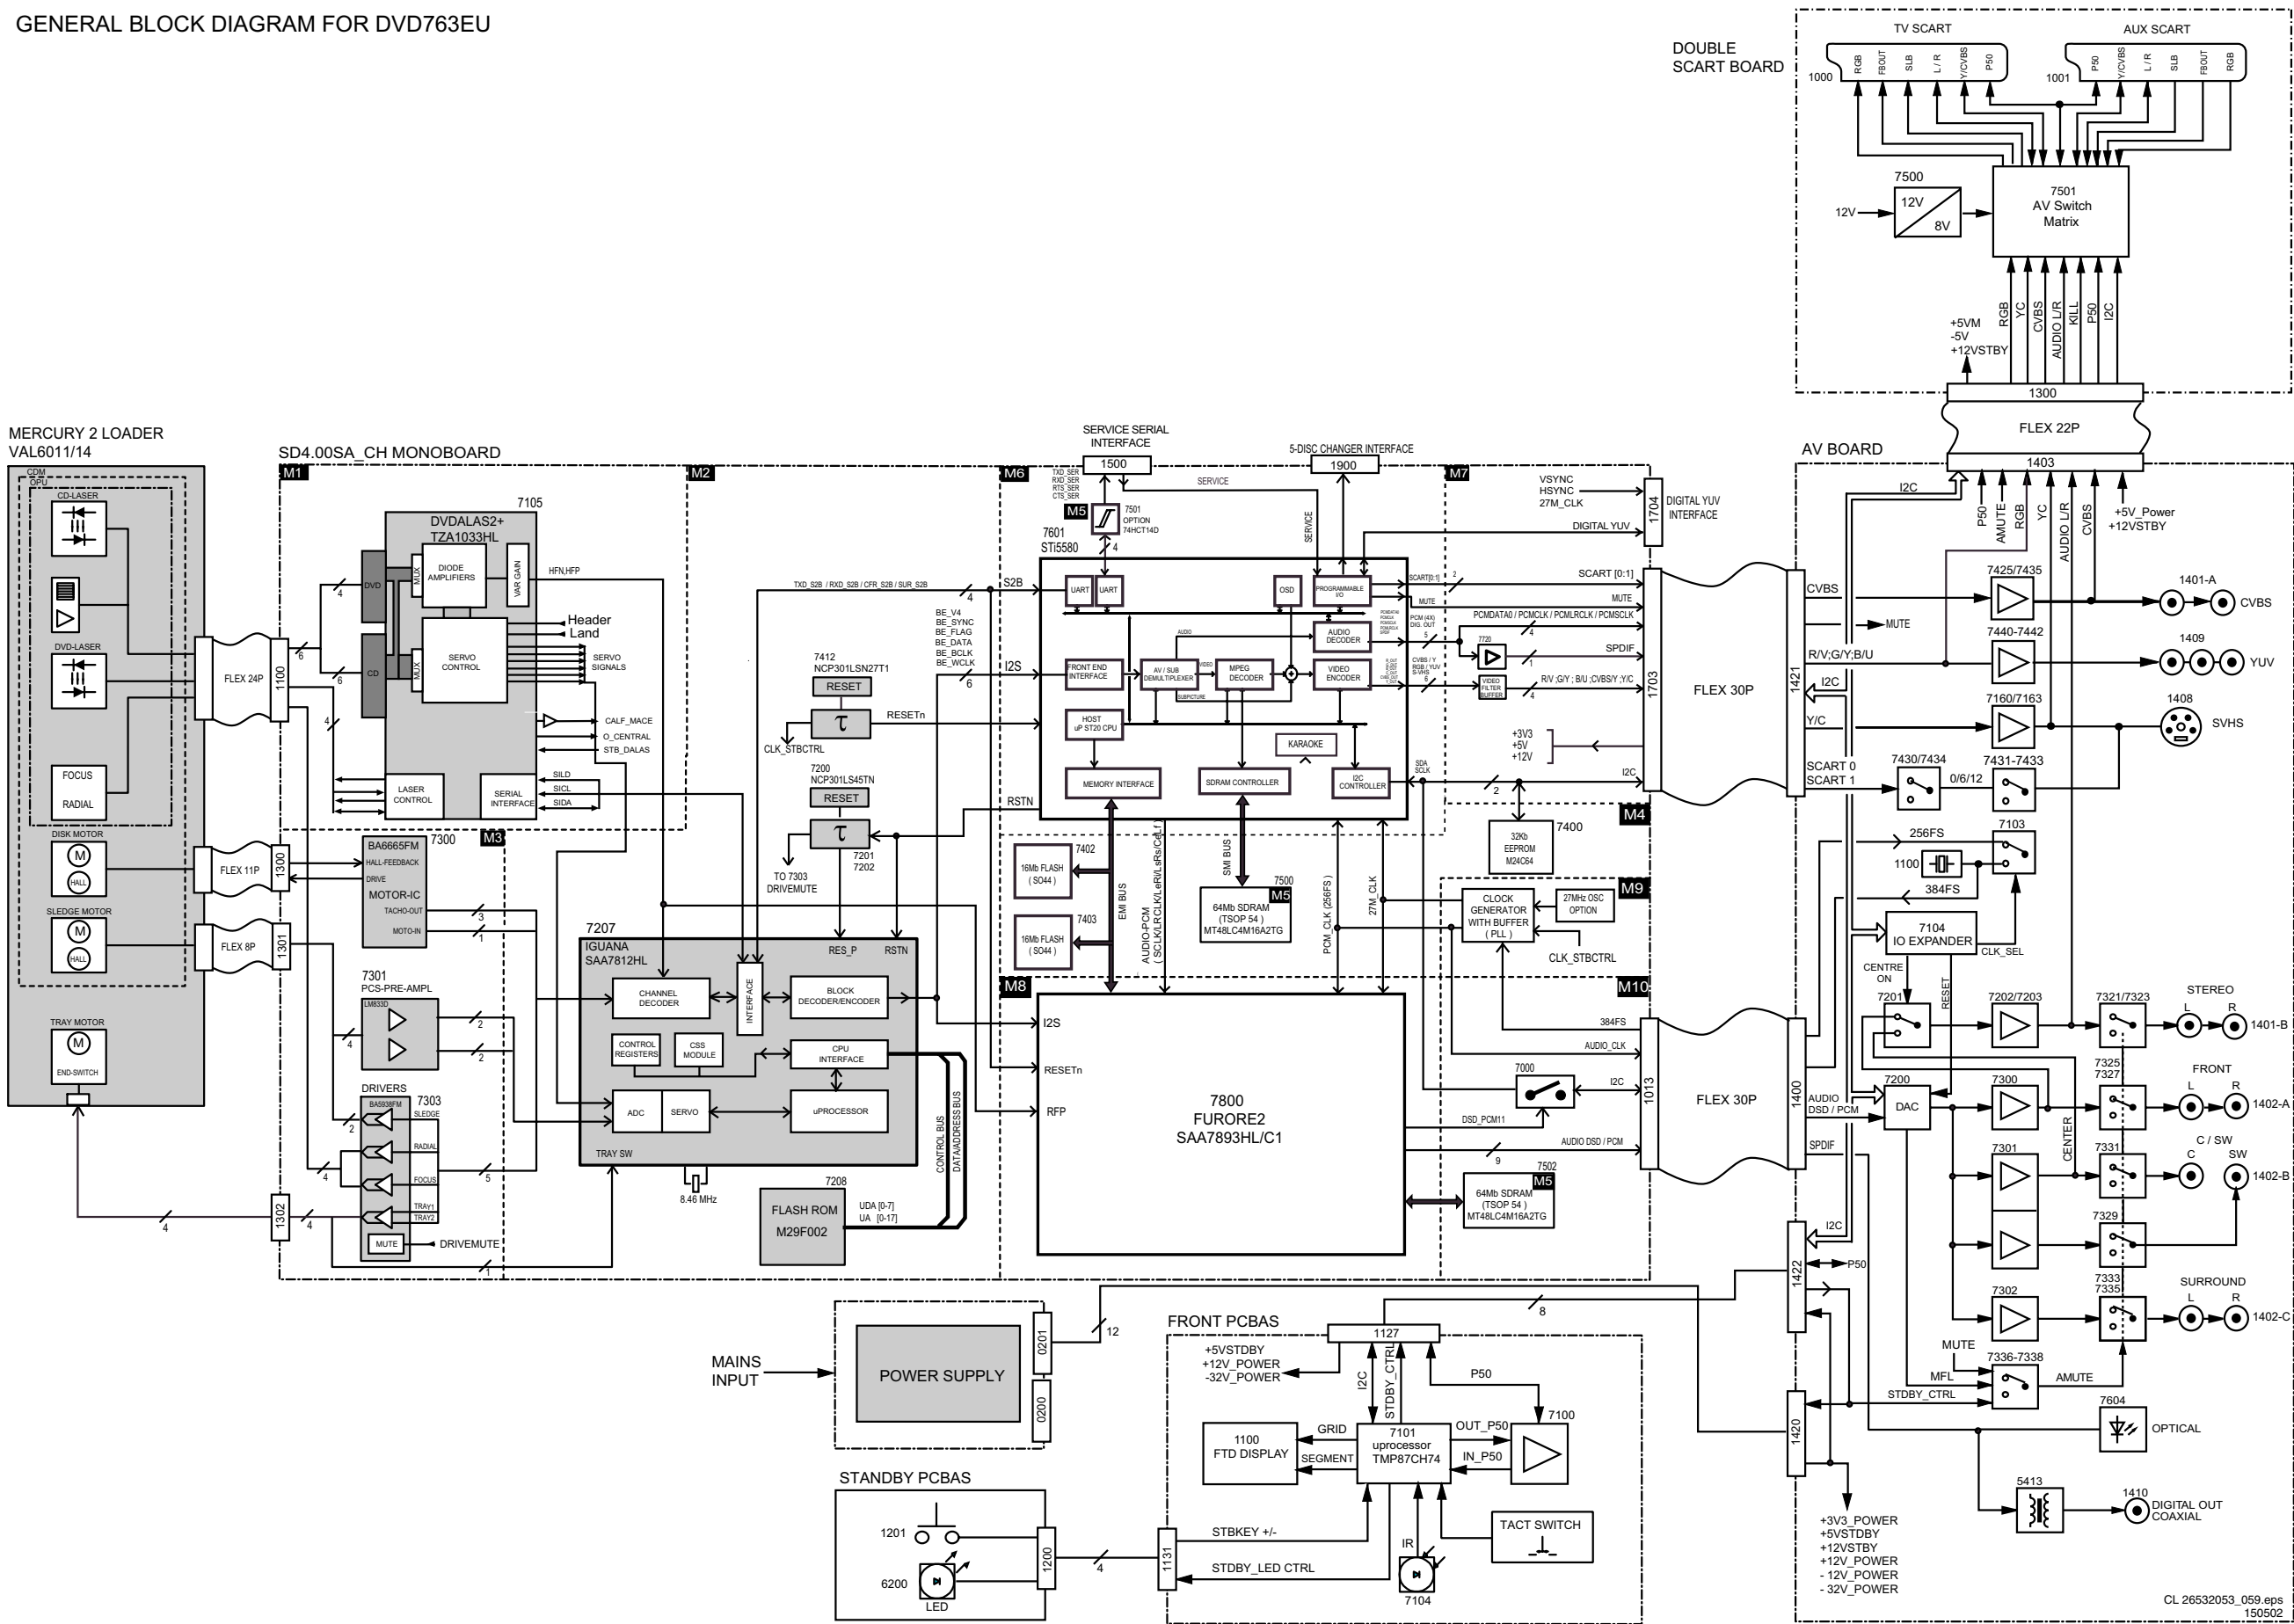

P50 (or Easylink) is a bi-directional serial interface for communication between video equipment. To check for the functionality of the P50 Interface, refer to the chapter of 'Diagnostic Software Player Script' for full detail description.

Personal Notes:

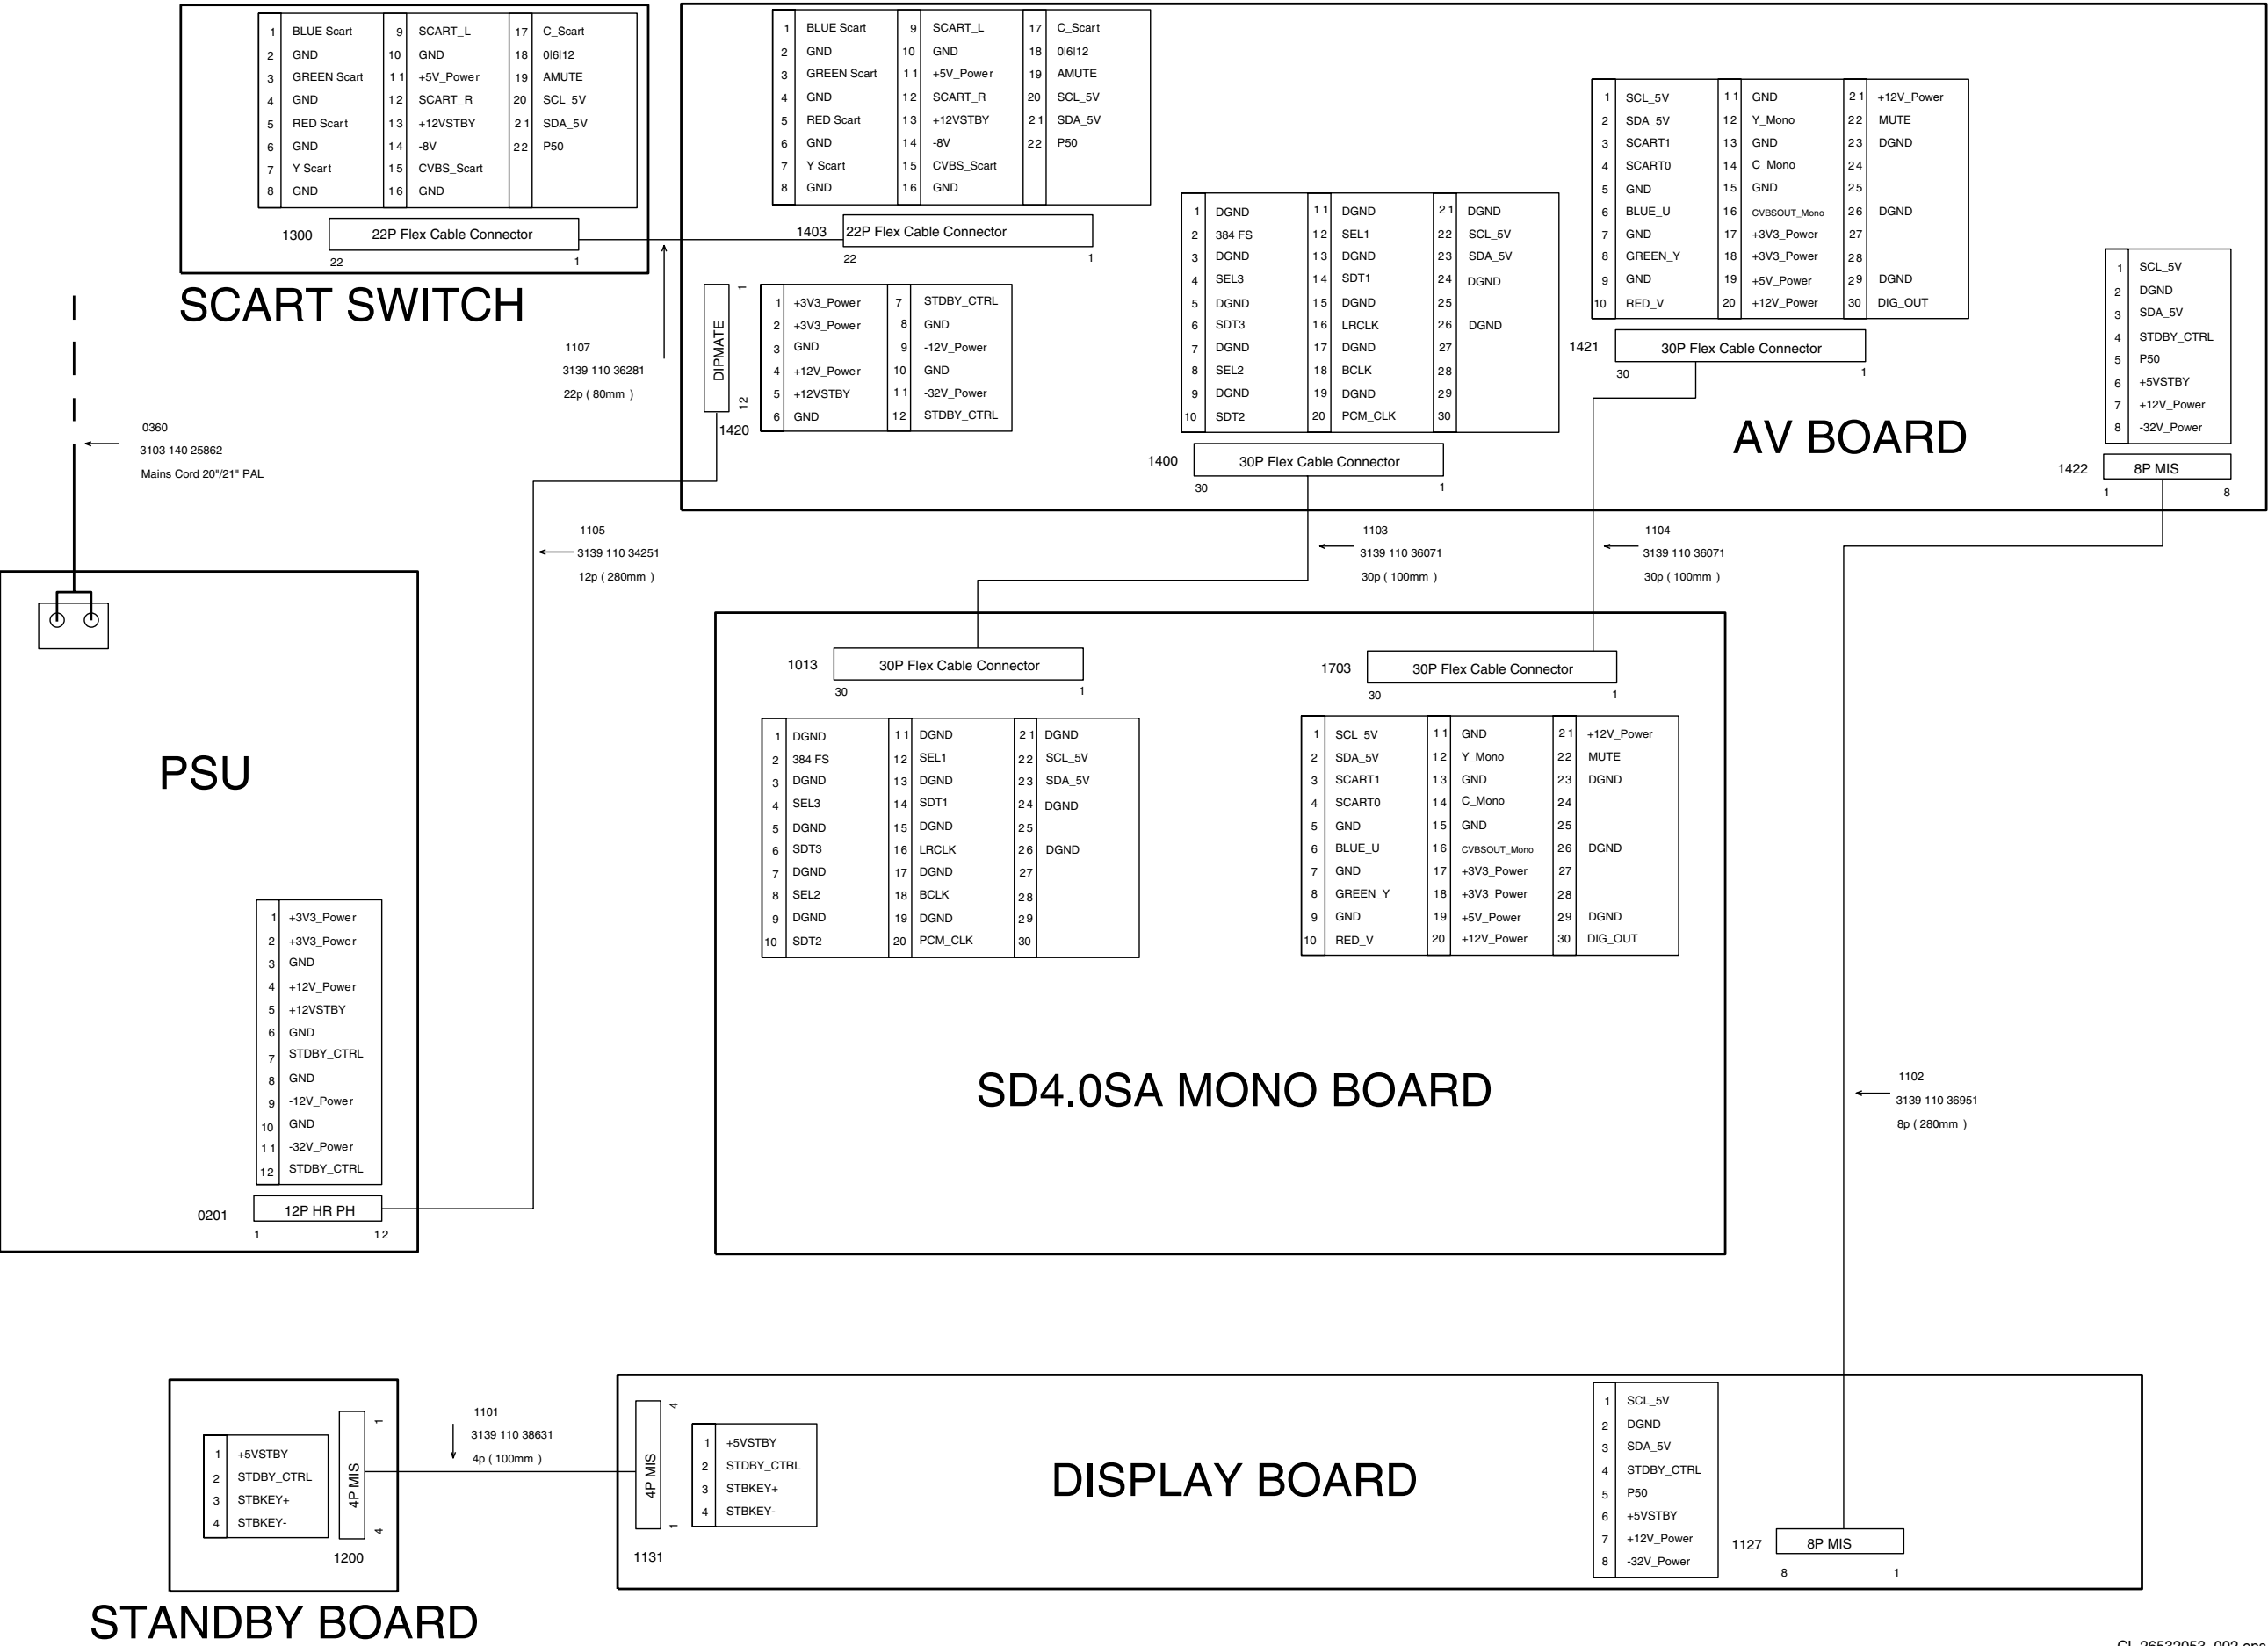

6. Block and Wiring Diagram.

9. Circuit Descriptions and List of Abbreviations

Index of this chapter:

1. Introduction
2. Power Supply Unit (PSU).
3. Loader/Mono Board.
4. Audio Video (A/V) Board.
5. Front Display Board.
6. Abbreviations
7. IC Data

Notes:

- See also the SD4.0 SA_CH Service Manual (3122 785 12480).
- Figures can deviate slightly from the actual situation, due to different set executions.
- For a good understanding of the following circuit descriptions, please use the diagrams in chapter 6 and 7. Where necessary, you will find a separate drawing for clarification.

9.1 Introduction

The DVD763SA is a model from the SACD 2002 'single disc' range. It uses a 2nd generation Philips SACD mono board, based on the Furore 2 DSD/DST decoder.

Below you will find a circuit description of the several modules.

9.2 Power Supply Unit

9.2.1 Introduction

This supply is a Switching Mode Power Supply (SMPS), which uses the control IC TY720xx to produce pulses to drive the power 'switch' (MOSFET). The TY720xx (IC7130) is a high performance, current mode controller for DC-to-DC converter applications.

The operation frequency varies with the circuit load. When the output power demand decreases, the switching frequency raises, with a maximum frequency of 125 kHz (defined by C2130 at pin 5). At this point, the internal VCO takes over and starts to decrease the switching frequency.

This has some benefits compared to a 'fixed frequency' flyback converter. The efficiency is better, which results in a lower power consumption.

9.2.2 Output Voltages

The following output voltages are present on connector 0201:

- Pin 1 and 2: +3V3_POWER.
- Pin 4: +12V_POWER
- Pin 5: +12VSTBY.
- Pin 7: +5VSTBY.
- Pin 9: -12V_POWER.
- Pin 11: -32V_POWER.

Note: The suffix 'STBY' indicates that the supply is not switched 'off' during Standby Mode. Power switching is done with the STBY_CTRL signal from the slave processor.

9.2.3 Operation

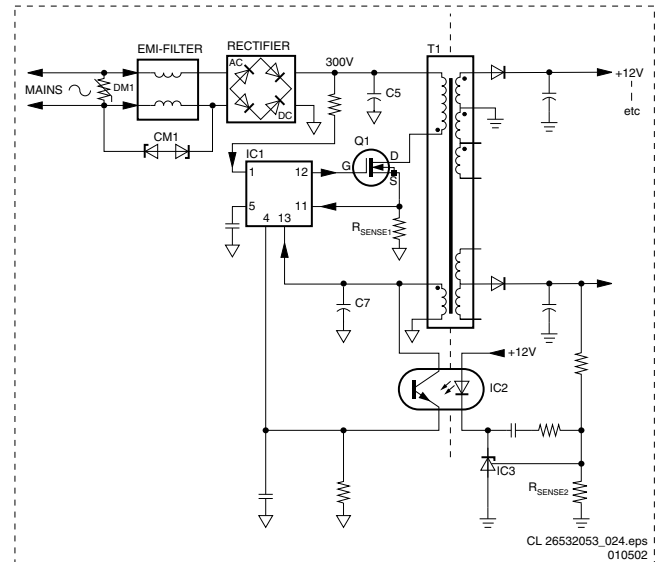

Figure 9-1 Power Supply

Mains Input Circuit

The bridge rectifier D6110 rectifies the mains voltage, after which C5 (2117) smoothens it. The DC voltage across this capacitor is the DC input voltage (approximately 300V), to pin 1 of transformer T1 (pin 9 of 5190) and pin 1 of IC1 (7130). The mains input also consists of a (differential mode) lightning protection DM1 (R3110) and a (common mode) lightning protection CM1 (D6114/15).

Start-up Circuitry

The rectified voltage from the bridge rectifier is connected to pin 1 of IC1. This voltage will charge the Vcc capacitor C7 (C2131). When this voltage, (at pin 13), reaches the start-up threshold of min. 15V, the control circuit starts to operate. After start-up, the control IC requires a sinking current, which the start-up circuitry cannot deliver. Therefore a take-over circuitry (a coupled winding of transformer T1) is present. The voltage at this point will take over the supply voltage at pin 13 of the IC1(7130).

If the take-over circuit does not function, IC1 (7130) will switch 'off' again at the minimal operating voltage of +8V. The whole operation cycle will repeat itself with audible hiccup sound if take-over is not present.

Secondary Voltage Sensing

The secondary voltage regulating circuit comprises of opto-coupler IC2 (7190), which isolates the error signal from the control IC on the primary side, and a reference component IC3 (7290, TL431).

Figure 9-2 TL431

This reference component has two functions:

- A very stable and accurate reference diode
- A high gain amplifier.

When the output voltage increases (due to a reduction in the load), the voltage across RSENSE-2 (R3290/R3291) increases to above the internal reference voltage of 2.5V. The TL431 will conduct and the current through the opto-coupler will increase. This results in an increase of the voltage at pin 4 of IC1, which will reduce the 'on' time of Q1 (FET 7125). In the event of an output voltage decrease (due to an increase in the load), the control circuit will operate in the opposite way.

Primary Current Sensing

The current through FET Q1 will result in a voltage drop across RSENSE-1 (R3120-23). This line goes to pin 11 of IC7130, which is the current sense input. The higher the input voltage, the more the primary current is limited. In this way, the maximum output power of the power supply is limited.

Under-voltage Protection

If the supply voltage at pin 13 of IC7130 drops below 7.2V (typical), e.g. due to a shorted secondary voltage or excessive load, the drive pulse at pin 12 is disabled and the controller will switch 'off'.

Over-voltage Protection

An internal over-voltage protection circuitry continuously monitors the Vcc pin. If, after start-up, this voltage exceeds 40V, the internal latch circuit is triggered, the output buffer is disabled, and the SMPS goes into over-voltage protection. Now a complete restart sequence is required.

Note: If the event of the over-voltage situation remains present, the SMPS will go in sequence of protection, start-up, protection and the cycle repeats. This effect is highly audible.

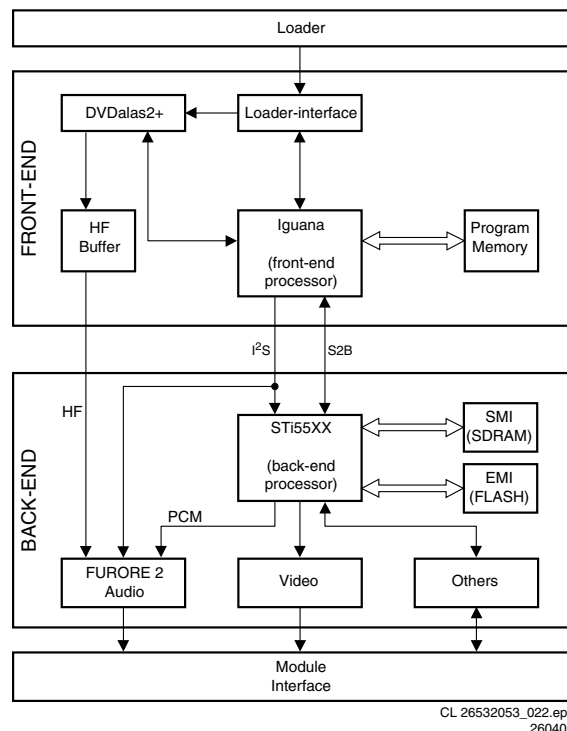

Figure 9-3 Block Diagram Loader/Mono board

The SD4.00_SA_CH (SACHI_4) is the 2nd generation Philips Architectural Standard Design of SACD mono board based on Furor 2, and will be used in the new generation of SACD players. It is designed in a multi-task way so that it can support the following optional main functions:

- SD4.00_SA_CH: Support SACD player with 5-disc changer.
- SD4.00_SA: Support SACD player with single-disc.
- SD4.00_CH: Support DVD player with 5-disc changer but without SACD playback.
- SD4.00_SA_I2C: Support SACD player with single-disc and I2C slave.

The SD4.00_SA_CH (SACHI_4) module consist of the following key components:

1. **OPU:** Mercury 2 Loader VAL6011/14 (slim type) for a single-disc SACD player, or DVD VAM6001/14 mechanism for a 5-disc SACD changer.
2. **Front-end:** M2 Basic Engine.
3. **Back-end:** DVD Host Processor STi55xx and Furoro 2 SACD DSD/DST decoder.
4. **Power supply:** To convert the PSU voltages to the correct values.
5. **Reset circuit:** This circuit that the booting of the several devices on the mono board takes place in the correct order.

9.3.1 The Optical Pick-up Unit (OPU)

The Mercury 2 Loader has an optical unit consisting of two lasers:

- One for CD with a wavelength of 780 nm.
- One for DVD with a wavelength of 650 nm.

The TZA1033 (item 7105) controls the data from these lasers, and the supply to them.

9.3.2 Front-end: the Servo Part

The front-end consists of:

- The Loader interface
- The Servo Processor/Decoder

- The Interface/Program Memory

The Loader Interface

The TZA1033HL/K2 (or DVDALAS2plus, item 7105) is an analogue pre-processor and laser supply circuit. It contains data amplifiers and several options for radial tracking and focus control.

It is possible to optimise the dynamic range of this pre-amp/processor combination for the LF servo and RF data paths. The gain in both channels is separately programmable. This will guarantee an optimal playability for all kind of discs.

Also, a dual laser supply is implemented, with fully automatic laser control including stabilisation and an ON/OFF switch, plus a separate supply pin for power efficiency.

The Servo Processor/Decoder

In the SD3.0 module, the servo signals were fed to the MACE2 servo processor, while the HF output signal was fed to the SAA7335 decoder. In the new SD4.0SA_CH module, these ICs are combined into one chip: the SAA7812 Iguana.

This chip contains the following blocks: channel decoder, block decoder, servo processor, and microcontroller.

The servo circuit in the SAA7812 (item 7207) takes care of the servo controls.

In a CD system, there are some twelve control loops active. About six of them are needed to adjust the servo error signals that is once per disc rotation. It also adjusts offsets, signal amplitudes, and loop gains (AGCs), to enlarge system robustness and to avoid expensive potentiometer adjustments in production.

The other six loops determine the laser spot position on the disc in the radial, axial (focus), and tangential directions. It also has to take care that the spot accesses a required position as fast as possible. This access system consists of two parts, namely the actuator and the sled, which are (within a certain range) mechanically and electrically independent.

Therefore, during an access, the servo has to control as well the actuator as the sled.

The analogue signals, from the diode pre-processor, are converted into a digital representation using A/D converters. For the communication between the host processor (STi55xx) and the servo processor, the S2B bus is used. This bus supports full-duplex asynchronous communication.

The SAA7812 is also a combined CD/DVD compatible decoding device. The device operates with built in hardware for CD/DVD error correction and de-interleaving operations. It decodes EFM or EFM+HF signals directly from the laser pre-amplifier, including analogue front-end, PLL data recovery, demodulation, and error correction.

Its analogue front-end input (the channel decoder), converts the HF input signal to the digital domain via an 8-bit ADC, preceded by an AGC circuit to obtain the optimum performance from the converter. An external resonator clocks this block. This subsystem recovers the data from the channel stream. It corrects asymmetry, performs noise filtering and equalisation, and finally recovers the bit clock and data from the channel using a digital PLL.

The demodulator part detects the frame synchronisation signals and decodes the EFM (14 bit) and EFM+ (16 bit) data and sub-code words into 8-bit symbols. Via the serial output interface, the I²S data (audio and video) go to the DVD decoder STi55xx.

The spindle-motor interface provides both motor control signals from the demodulator and, in addition, contains a tachometer loop that accepts tachometer pulses from the motor unit. They drive the motor IC (BA6665FM, item 7300).

The SAA7812 has two independent microcontroller interfaces. The first is a serial I²C-bus and the second is a standard 8-bit multiplexed parallel interface. Both of these interfaces provide access to 32 8-bit registers for control and status.

The Interface/Program Memory

The interface between front-end (SAA7812) and back-end (STi55xx) is via:

- I2S bus (BCLK, DATA, WCLK, FLAG, SYNC and V4).
- S2B bus (RXD_S2B, TXD_S2B, CPR_S2B and SUR_S2B).
- Miscellaneous I/O ports (RSTNF= front-end reset, EANF= front-end processor boot select).

Service tip: These lines contain series resistors (47 or 100 Ω) for easy hardware debugging, and for EMC/noise reduction of the high-speed I2S lines.

The front-end processor SAA7812 (Iguana) has two boot modes: normal boot from flash memory, or serial mode. The boot selection is via the EANF pin. The Iguana samples the EANF signal level once during boot-up. Once boot-up is completed, this pin is no longer used for this purpose.

However, in the SD4.0SA_CH circuit, the EANF is also connected to the flash memory. Therefore, when this pin is LOW, the lower 1Mbits of the memory is accessible. Conversely, when this pin is HIGH, the upper 1Mbits is accessible.

Under front-end normal operation, the program memory (less than 1Mbits in size) should reside in the lower bank. Therefore, the EANF pin should be LOW at all times. Since the actual flash memory used is 2Mbits, the upper 1Mbits is unused. This area is reserved for possible use by the front-end self-diagnostic software, or flash download application.

9.3.3 Back-end: the Digital Part

The back-end consists of:

- DVD back-end processor
- SACD DSD processor
- Audio output
- Video output
- Clock factory
- Miscellaneous

DVD Back-end Processor

The SD4.0SA_CH is designed for the STi55xx family. Some of the DVD related features of these ICs are:

Processor overview

| Function | STi5580 | STi5588 | STi5519 |
|---|---------|---------|---------|
| Basic CD/VCD/DVD decoding | X | X | X |
| Extra 2-channel of I2S output (PCMDATA3) | X | X | |
| Karaoke | X | X | |
| DTS | X | X | |
| Audio post processing (equalizer, level meter, etc) | | X | |
| DVD audio | | X | |
| Progressive scan at analog video output | | X | |

CL 16532163_046 app
240102

Figure 9-4 Processor overview

The STi5580 has the same architecture as the STi5508 (used in earlier DVD generations), and is pin-to-pin compatible.

It works on 3.3 V (VDD), and comprises the following functions:

- Video decoder, which supports MPEG1 and MPEG2.
- Audio decoder that supports AC-3, MPEG1, MPEG2, DTS, PCM, S/PDIF, and MP3.
- PAL/NTSC video encoder with simultaneously Y/C, CVBS, and RGB/YUV outputs.
- The video encoder supports Closed Caption and allows MacroVision 7.0/6.1.
- Full screen On Screen Display (OSD) generator.
- Three on-chip PLLs to generate all necessary clocks (as reference the 27 MHz video clock is used).

Input

Input data comes from the I2S-bus. The front-end interface of this device, accepts DVD, CD and CD-DA information.

Signal Processing

For video, the input data stream is decoded to the appropriate MPEG, Sub Picture, and OSD data streams, after which they are fed to the PAL/NTSC encoder. This cell will convert the digital MPEG/Sub Picture/OSD stream into a standard base band signal and into RGB components. It handles interlaced and non-interlaced data, can perform CC/TXT encoding, and allows MacroVision copy protection.

For audio, the processing cell is a fully compatible DTS, Dolby Digital (AC-3), MPEG1, MPEG2, PCM decoder, capable of decoding 5.1 and 2 channel streams.

Output

For video, six analogue output pins are available on which CVBS, S-VHS (Y/C), and RGB signals are present. They go, via a buffer, to connector 1703. As an option, a digital YUV output is available at connector 1704.

External Memory

The STi55xx family is capable of accessing external memory via three buses:

- **The enhanced memory interface (EMI).** This interface is configurable and can be used to access Flash, ROM, and various flavours of DRAM.
- **The shared memory interface (SMI).** The SMI is only used to access SDRAM. The SMI is connected to a 64Mbits (4M x 16bit) 7.5ns SDRAM (item 7500). The SDRAM has the following functions:
 - It is used by the MPEG video decoder as a frame buffer,
 - It holds the software and the variables used by it.
- **The I2C bus.** Via this bus, the NVRAM (or EEPROM) is accessible. This memory is used to store user settings, player settings, and region code. As the STi55xx I/O-lines are potentially unable handle 5V inputs, a voltage level shifter is foreseen for all I2C-busses. This circuit will isolate the STi55xx I2C ports (3.3V) from the system I2C bus (5V). See figure below.

Figure 9-5 I2C voltage level shifter

The SACD DSD processor

The Furore-IC is a one-chip design, containing all the hardware that is required for SACD processing. It is intended to interface with the STi55xx-family DVD video decoders.

The Furore-IC contains a memory interface to support an external 16 or 64 Mbit SDRAM.

During SACD application, the STi55xx serves as a host, whereby the Furore is controlled via the EMI interface. The Furore processing part is not used during all other play modes. In these modes, the PCM audio signals are fed through the Furore to the appropriate DAC.

Block diagram

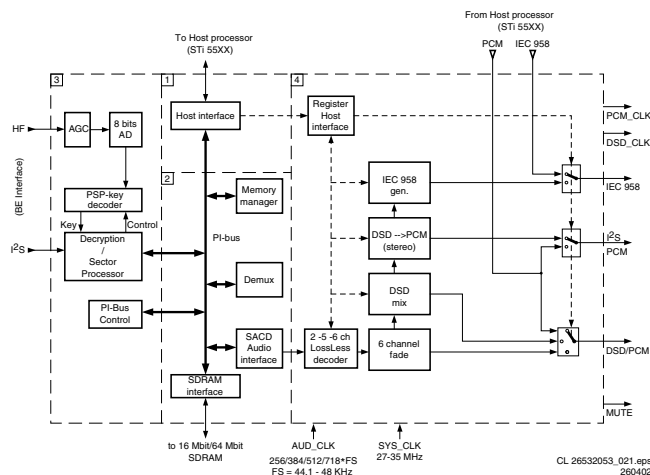

Figure 9-6 Block diagram Furore

We can divide the Furore-IC in four main parts (see block diagram):

1. **Host interface.** This is the link between the host bus and the internal registers and memory bus. It also supplies the general reset signal (HW and SW) and the interrupt signals.
2. **Data processing.** All modules and peripherals in this part are connected to a so-called PI-bus. It is beyond the scope of this manual to go more in detail on this subject.
3. **Copy protection.** On every SACD disc, a PSP-signal is recorded. The player can only play a disc if a valid PSP-signal is detected. This PSP-key is recorded, via a special mechanism, in the EFM-signal on the disc. To detect this key, the analogue HF-signal from the optical pick-up unit is fed directly to the Furore-IC. Via an AGC, the signal is fed to an ADC. The digitised HF signal is then fed to a block where key is encrypted. Control of this process is done via the host interface (sector processor).
4. **DSD decoding and post processing.** In this part, all processing is done to generate a DSD and/or an I²S stream (from the de-multiplexed stream coming from the data processing block), in such a way that it can directly be connected to a DA-converter. All processing is done on 384*FS.

Interfaces

- **Basic Engine Interface:**
 - Data input interface. The Basic Engine Interface (I2S) is connected to the output of the SAA7335 (HD61) high speed CD decoder.
 - Analogue HF input. The analogue HF input, coming from the optical pickup unit (OPU), is also fed to the Furore-IC, to extract the copy-protection information PSP (Pit Signal Processing = invisible data is stored on to disc, which is required to decrypt the encrypted content).
- **SDRAM Interface:** The SDRAM interface forms a glue less interface to one 64 Mbit SDRAM device. The interface takes care for the power-up sequence, mode programming and refreshing of the SDRAM devices. This is hard coded in the interface and does not have to be controlled by the host.
- **Audio data input/output Interface:**
 - DSD/PCM combined data output. DSD_PCM: Output intended for a combined 6-channel DSD (SACD) and PCM (DVD-CDDA) DAC. Switching between the PCM data coming from the STi55xx, and the internal generated DSD signals, is done in the Furore IC.
 - Stereo DSD only output. DSD_stereo: 2-channel DSD output with stereo down mix in the case of 5- and 6-channel, and normal stereo in case of 2-channel DSD mode.

- Stereo PCM data output. Two possible stereo sources can be selected as stereo PCM output:
 1. Stereo PCM coming from the STi55xx via the PCM input on Furore.
 2. Stereo or down-mix-PCM derived via a decimation filter from the SACD-DSD signal.
- Digital audio output interface (IEC958). The IEC958 format is intended to connect the DVD736SA to a digital receiver. No DSD signals are defined for IEC958, therefore the 'DSD-->PCM converted' signal is transmitted. Following two types of signals are possible on the digital interface:
 1. IEC958 data coming from the STi55xx.
 2. IEC958 data (stereo or down-mix-PCM) derived via a decimation filter from the SACD-DSD signal.
- Clock + reset input. Two different processing clocks and a reset pulse are needed:
 1. Sys_clk: System clock for data processing part, frequency can be 27 MHz or 768*FS.
 2. 384*FS: Processing clock for LLD and post processing.
 3. RESETn is an asynchronous reset and should be low for at least 1 period of DSD_CLK.

Memory

- **SDRAM.**
 - The size of the SDRAM is 64 Mbit.
 - The SDRAM (items 7500 and 7502) has the following functions:
 - It is used by the MPEG video decoder as a frame buffer,
 - It holds the software and the variables used by it.
- **Flash-ROM.** Two 2MB Flash-ROMs (items 7402 and 7403) hold the DVD firmware, and are controlled by pin 186 (FLASH_OEN) of the STi55xx. It must be able to perform a download (by disk or OS-link) in a Flash-only system.
- **EEPROM.** User settings, player settings, and region code are stored in a 32 Kb I²C EEPROM.

Audio Output

The audio interfaces available in SD4.0SA_CH are I2S and S/PDIF for digital audio output, and I2S karaoke microphone input.

In SACD player, two types of DACs (that are PCM DAC and high end DSD DAC), are used on AV board.

The audio data path to both DACs is routed via the Furore 2.

I2S audio

The STi55xx is capable of 6-channel I2S output. These channels can be configured to output 5.1 Dolby Digital, DTS, etc.

- PCM_OUT0: Left and Right.
- PCM_OUT1: Centre and LFE (subwoofer).
- PCM_OUT2: Left and Right surround.

Two additional channels (available in STi5580 and STi5588) are capable of providing down-mixed stereo.

S/PDIF

The S/PDIF signal level (pin 57, SPDIF_OUT) is 5V TTL at module interface. To meet the complete S/PDIF specifications, an external de-coupling circuit (item 7720, diagram M7) is implemented.

I2S karaoke (optional)

The STi5580 and STi5588 have built-in karaoke processing. The internal karaoke block accepts I2S signal, acting as the master by generating the required KOKPCMCLK frequency. This frequency is always 1/4 the music sampling frequency. An external analogue-to-digital converter (ADC), acting as slave, is required to convert the microphone signals to I2S signals.

CD-DA/DVD Data Path

The data path for CD-DA and DVD is as follows:

- I2S data from the M2 basic engine enters the STi55xx.
- The STi55xx processes the data, and sends the 6 PCM output channels to Furore 2. The LeRi channels are directly passed to the AV board also.
- The switch matrix of the Furore 2 sends the two incoming stereo PCM channels (LeRi) to the AV board.
- The switch matrix of the Furore 2 sends the six incoming PCM channels to the high end DAC board.
- The mute signal from the STi55xx is directly passed to the AV board. This requires a patch on the mono board.
- The IEC958 output of the STi55xx is fed directly to AV board.

The clock distribution is as follows:

- The master clock 384FS is received from the high end DAC board.
- From this clock the 27 MHz clock for STi5580 and the Furore 2 is derived (Video clock).
- From the 27 MHz clock the audio clock (256FS) is derived. The STi55xx and Furore 2 use this clock. For CD-DA FS amounts to 44.1 KHz, for DVD 48 or 96 KHz.
- In case of CD-DA, the high end DAC uses its internal clock (384FS). In case of DVD, the switch matrix of Furore 2 sends the audio clock (256FS) to the high end DAC on AV board.
- The AV board receives the 256FS clock.

Selection of the audio clock is done in the clock factory. For a description of the clock factory, see paragraph 'Clock Factory'.

SACD Data Path

The data path for DSD/DST is as follows:

- I2S data from the basic engine enters the Furore 2.
- The Furore 2 processes the data. This results in 6 DSD/DST channels.
- The switch matrix of the Furore 2 sends the 6 DSD/DST channels to the high end DAC on AV board.
- The 6 DSD/DST channels are down mixed to a stereo PCM signal.
- The switch matrix of the Furore 2 sends the stereo PCM signal to the AV board.
- The mute signal from the STi55xx is directly passed to the AV board. This requires a patch on the mono board.

The clock distribution is as follows:

- The master clock 384FS is received from the high end DAC on AV board.
- From this clock the 27 MHz clock for STi55xx and Furore 2 is derived (video clock).
- From the 27 MHz clock the audio clock (256FS) is derived. The STi5580 and Furore 2 use this clock.
- The high end DAC on AV board uses its own XTAL clock (384FS). The 256FS clock to the DAC board is switched off, to prevent for interference.
- The AV board receives the 256FS clock.

Selection of the audio clock is done in the clock factory. For a description of the clock factory, see paragraph 'Clock Factory'.

Video Output

Digital video (optional)

Digital YUV output is routed directly from STi55xx ports to a 24-pin connector (item 1704). From the same connector, the HSYNC, VSYNC and 27MHZ_CLK signals are available. The digital YUV connector is the interface to external video processing devices; such as high quality progressive scan codex and high quality video DAC.

Analogue video

The STi55xx is capable of 6-channel analogue video. Three channels (pins 25, 26 and 27) are RGB or YUV format, while the other three channels (pins 32, 33 and 34) are Y, C, and CVBS.

A video output buffer (see diagram M7, e.g. item 7701 for R) is implemented: an 8MHz/16MHz selectable filter stage and a 75Ω drive stage.

Clock Factory

One clock factory is implemented to support all clocks required by the Furore 2. The various master clock, which depends on whether SACD is present, is used for SD4.00_SA_CH. The clock factory of SD4.00_SA_CH is showed in Figure 8-2.

Figure 9-7 Block diagram clock factory

For the SACD player, the clock system is a DAC master clock system. For non-SACD player, the clock system is a mono board master clock system.

The Furore 2 supports clock 256*FS/384*FS/512*FS. The most convenient value in the market is 16.9344 MHz (384*FS, FS=44.1KHz). Therefore, the master clock on the SD4.00_SA_CH mono board is the 384*FS coming from the A/ V board. The 384*FS (16.9344 MHz) from the DAC clock, must always be present. It is buffered before it is sent to the Furore 2 and the rest of the clock factory. The IC S612G delivers a 27 MHz system clock.

The Furore 2 and Sti5580/Sti5588 (Video) use this clock. It is used to derive the PCM audio clocks 256*FS by the MK2703STR. This IC is also used to buffer the incoming 27 MHz clock.

The communication between the Sti55xx and the Furore 2 is asynchronous.

To support non-SACD playback, an on-board 27MHz oscillator delivers the master clock for SD4.00_SA_CH mono board.

Miscellaneous

Most general IO ports are connected directly to the module interface. Compared with the SD3.0 module, some on-board circuits are removed, as it made more sense (and more cost effective) to implement these circuits externally.

SCART Status Signal

The SCART0 and SCART1 signals are directly available at the module interface, where the 0_6_12V signal is generated. See table below:

Table 9-1 0_6_12V SCART status truth table

| Function | PIO3_6 (SCART0) | PIO3_7 (SCART1) | 0_6_12V (at SCART connector) |
|-------------------|-----------------|-----------------|------------------------------|
| TV display | 1 | 1 | 0V |
| TV display | 0 | 1 | 0V |
| 16:9 aspect ratio | 1 | 0 | +6V |
| 4:3 aspect ratio | 0 | 0 | +12V |

Mute

The audio MUTE signal (active 'high') is directly available at the module interface.

Service

Figure 9-8 Service Port Buffer

The service port (see diagram M5) is simplified to reduce cost. The unused RTS and CTS lines are no longer connected. A transistor buffer (item 7508) is used instead of the Schmitt Trigger buffer (item 7501).

The overall loading and driving capability of the RS-232 emulator port is not greatly changed. However, as a precaution, the Schmitt Trigger circuit remains in the layout as an optional implementation.

This SD4.0SA_CH has the same ComPair connector as in previous DVD generations. Flashing of the application-SW is not possible with the ComPair cable, except with a CD-R disc. For sets with Mask-ROM software, replace it with a programmed Flash (available via your Philips Service organisation).

Power Supply (diagram M7)

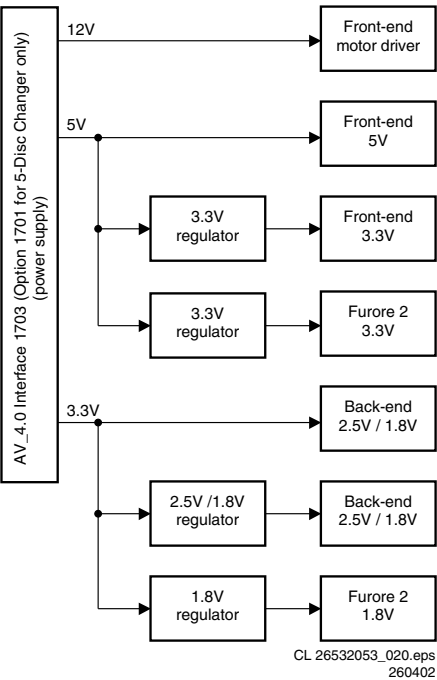

Figure 9-9 Mono Board Power Supply Block Diagram

The main power supplies to the module are 3.3V, 5V, and 12V (input via connector 1703).

The SACD DSD/DST decoder Furore 2 uses 1.8V for its core and analogue portion, and 3.3V for its interface. The on-board 1.8V linear regulator LF18ABDT and 3.3V linear LD1117DT33 are used to generate 1.8V and 3.3V power supply respectively. The back-end section mainly uses the 1.8V or 2.5V and 3.3V, which depend on which back-end processor is used. The on-board linear regulators LF25ABDT or LF18ABDT are used to generate the 2.5V (or 1.8V) required by the STi55xx. The front-end section mainly uses the 5V and 12V. An on-board linear regulator LD1117DT33 can be used to generate the 3.3V required by the front-end. The 12V is used by the motor and servo drivers.

Reset Circuit

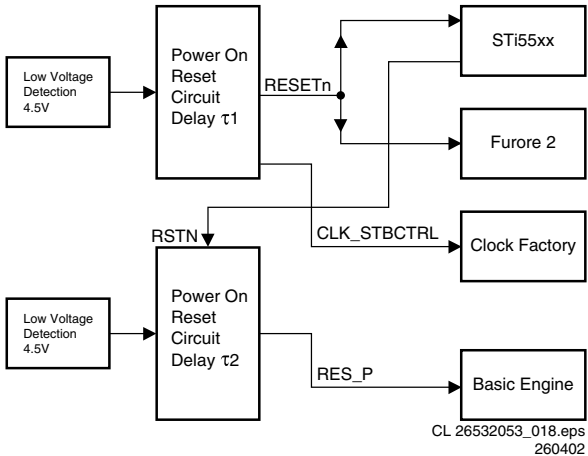

Figure 9-10 Block diagram of reset circuit

This reset circuit takes care that booting the different devices on the mono board takes place in the correct order. The correct reset order is:

1. The Power On Reset circuit (delay t1) creates a reset signal 'RESETn' to reset the STi55xx and Furore .
2. In the meantime, the Power On Reset circuit (delay t1) creates a reset signal 'CLK_STBCTRL', which is inverted to 'RESETn', to enable the Clock Factory.
3. Then, the Power On Reset circuit (delay t2) generates a reset signal 'RES_P' to reset the Basic Engine.
4. The STi55xx can now reset the Basic Engine via 'RSTN'.

9.4 Audio/Video (A/V) Board

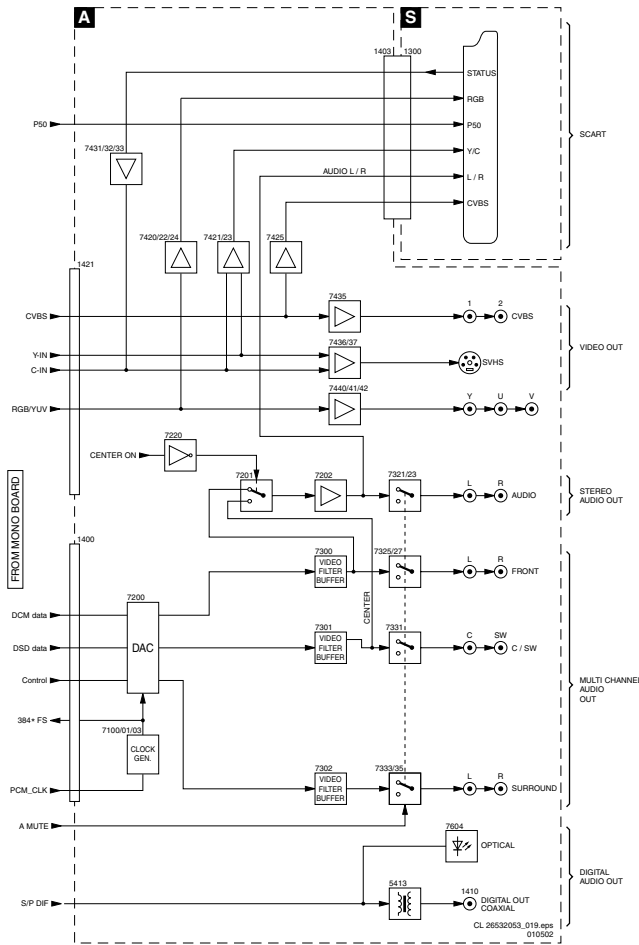

Figure 9-11 Block diagram A/V board

This board is the interface panel between the DVD-player and its peripherals. See also block diagram in Chapter 6.

9.4.1 Control

The control of the A/V board is done by the I²C-decoder IC7104 (see table below):

Table 9-2 Control lines overview IC7104

| Description | Pin | Hi | Lo |
|-------------|-----|----------------|----------------|
| CLK_SEL | 12 | Internal clock | External clock |
| DAC_RESET | 10 | Normal | Reset |
| CENTER_ON | 9 | ? | ? |

9.4.2 Video

The analogue video signals from the Mono Board are buffered before they are fed to the several output connectors (SCART, Cinch, and SVHS). The video output from the A/V Board is RGB/YUV, YC, and CVBS.

9.4.3 Audio

The digital audio signals are fed to a 6-channel DAC CS4362 (item 7200, 48-pin LQFP) for the audio output. This DAC accepts both DSD and PCM data streams.

There is a control line from the STi55xx, called CENTRE_ON, which is used to switch between the centre channel and front channels for both SACD- and DVD modes.

9.5 Control and Display

9.5.1 Control

The key component on this board is the (slave) microprocessor (item 7101). It runs on an 8 MHz system clock generated with a ceramic resonator (item 1128) and has a reset circuit that is triggered by the +5VSTBY voltage.

After the RESET pulse (active LOW), the STB_CTRL line (pin 21, item 7101) will release the reset of the host uP (on the mono board) via the switched 3V3 supply. See circuit around item 7409 on mono board (diagram M4).

- Other slave processor functions are:
- Generation of a scanning grid for the keys.
 - Generation of the display grid and segment scanning.
 - Generation of a square signal to generate the filament voltage for FTD display.
 - Input for RC5/6 remote control protocol. The logic is HIGH > 4.5V and LOW < 0.3V.

Standby LED

Transistor 7105 drives the Standby LED. When the STBY_LED signal from the slave processor is 'high', the LED is 'off'.

Key Matrix

When a key on the local keyboard is pressed, the signal at the scanning pins of the microprocessor (pins 26 to 37) goes from +5V to 0V.

IR Receiver

The IR controller in the slave processor handles both RC5 and RC6 signals. The logic is +5V for 'high' and 0V for 'low' (measure at pin 22).

P50 Interface

P50 (or Easylink) is a bi-directional serial interface for communication between video equipment. This communication goes via pin 10 of the SCART-bus.

9.5.2 Display

The slave uP provides a negative DC switching voltage, to drive the 11-segment FTD. As the display consists of eleven segments, there are eleven grid signals (G1-G11) controlling each respective grid.

The slave processor has an internal square signal generator (42 kHz with duty cycle 45/55), to generate the AC filament voltage. TS7103 and 7106 amplify the square signal before it is applied to the display ($V_{AC} = V_{FIL_1} - V_{FIL_2}$, $V_{RMS} \approx 3.5\text{ V}$). The necessary power supply of -26 V is derived (via zener diode 6101) from the -32V supply, which is coming directly from the Switching Mode Power Supply (SMPS).

1. The required IC voltage is the +5VSTBY, which is present during Standby Mode.
2. When the RESET circuit (item 7102) is triggered by the +5VSTBY, the slave uP initialises.
3. This will set the STDBY_CTRL signal to LOW, which will switch on the +3V3 and +5V.
4. Once these voltages are provided, the host uP (on the mono board) will reset.
5. Now, the host uP will initialise, and indicate the slave uP to activate the Standby Mode (STBY_CTRL) signal.
6. The player wakes up from the Standby Mode when any button is pressed on the front panel, or when the 'Power' button is pressed on the Remote Control.

Note: The slave uP will not reset successfully, if the 8MHz clock oscillator has not stabilised (check on pin 8 of IC7101).

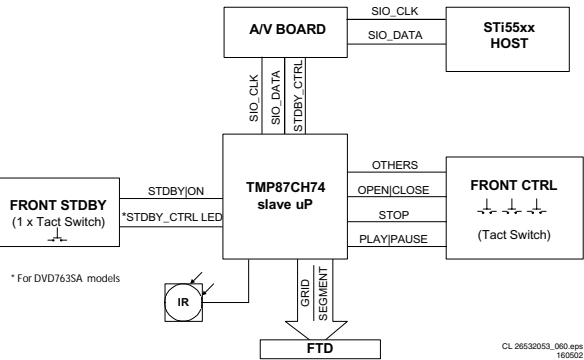

Figure 9-12 Slave processor interface

The block diagram above, illustrates the interfaces of the slave uP. The start-up sequence is as follows:

9.6 Abbreviation list

| | | | |
|----------|--|------|--|
| ADC | Analogue to Digital Converter | SRAM | Static RAM |
| AGC | Automatic Gain Control | STBY | Standby |
| ASD | Architecture and Standard Design | SVCD | Super Video CD |
| AM | Amplitude Modulation | SW | Software |
| BE | Basic Engine | THD | Total Harmonic Distortion |
| ComPair | Computer aided rePair | TTL | Transistor Transistor Logic (5V logic) |
| CD-DA | CD Digital Audio | uP | Microprocessor |
| CS | Chip Select | VAL | Video Audio Loader |
| CVBS | Composite Video Blanking and Synchronisation | VCD | Video CD |

| HPF | High Pass Filter | | |
| HW | Hardware | | |
| I2C | Integrated IC bus (signals at 5V level) | | |
| I2S | Integrated IC Sound bus (signals at 3.3V level) | | |
| IC | Integrated Circuit | | |
| IF | Intermediate Frequency | | |
| IRQ | Interrupt Request | | |
| KOK | Karaoke | | |
| LFE | Low Frequency Effect (= subwoofer) | | |
| LLD | Loss Less Decoder | | |
| LPCM | Linear Pulse Code Modulation | | |
| LRCLK | Left/Right clock | | |
| LVTTL | Low Voltage Transistor Transistor Logic (3.3V logic) | | |
| M2 | Mercury 2 Basic Engine | | |
| MACE | Mini All Compact Disc Engine | | |
| MPEG | Motion Pictures Experts Group | | |
| NC | Not Connected | | |
| NVM | Non Volatile Memory (= IC containing TV related data e.g. alignments) | | |
| OC | Open Circuit | | |
| OPU | Optical Pick-up Unit | | |
| PCB | Printed Circuit Board (see PWB) | | |
| PCM | Pulse Code Modulation | | |
| PCM_CLK | Audio system clock for DAC | | |
| PCM_OUTx | Audio serial output data | | |
| PSP | Pit Signal Processing | | |
| PSU | Power Supply Unit | | |
| PWB | Printed Wiring Board (see PCB) | | |
| RAM | Random Access Memory | | |
| RGB | Red, Green and Blue colour space | | |
| ROM | Read Only Memory | | |
| S2B | Serial to Basic Engine (= communication bus between host- and servo processor) | | |
| SCL | Serial Clock I2C | | |
| SCLK | Audio serial bit clock | | |
| SDA | Serial Data I2C | | |
| SDRAM | Synchronous DRAM | | |
| SMI | Shared Memory Interface | | |
| S/PDIF | Sony Philips Digital InterFace | | |

9.7 IC Data

In this paragraph, the internal block diagrams and pinning are given of ICs that are drawn as 'black box' in the electrical diagrams (with the exception of 'memory' and 'logic' ICs).

9.7.1 Diagram Power Supply
